6. Settings	Account, app, support, sign out

REFERENCE

1. Operator rules	Short do / don't checklist
-------------------	----------------------------

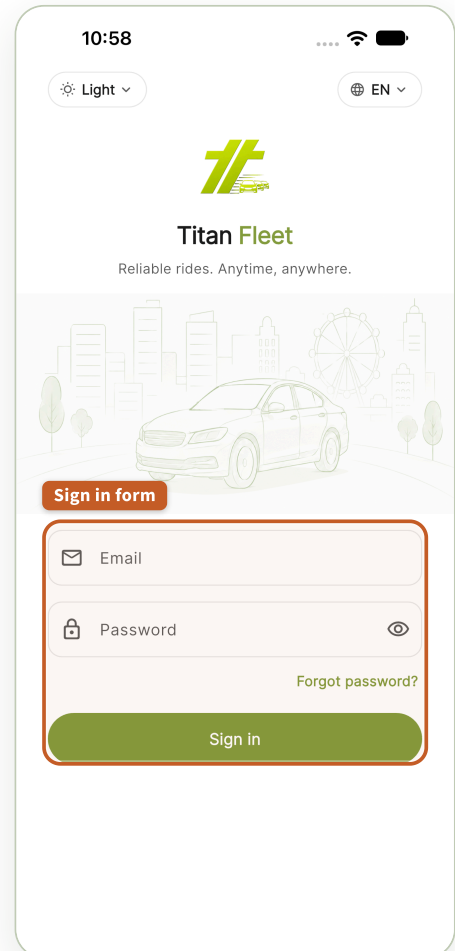

Sign in

Sign in to Titan Fleet with your fleet email and password, and set Light/Dark/System theme or language before you enter.

Start here · Email, password, theme, language

Steps

- 1 Open the Titan Fleet operator app to the Sign in screen.
- 2 Optional: set theme (Light / Dark / System) and language (for example EN) at the top.
- 3 Enter your fleet Email and Password, then tap Sign in.
- 4 Use Forgot password? if you cannot sign in — that starts a reset email code flow.

Explore this screen

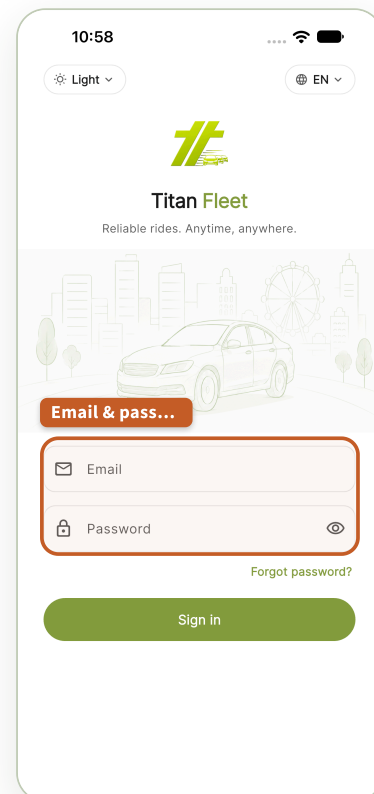

Email & password

Sign in with fleet credentials

Enter the operator Email and Password for your fleet account, then tap Sign in. Use the eye icon on the password field to show or hide what you typed.

TIP

Use the fleet / operator email your admin gave you — not a personal passenger account.

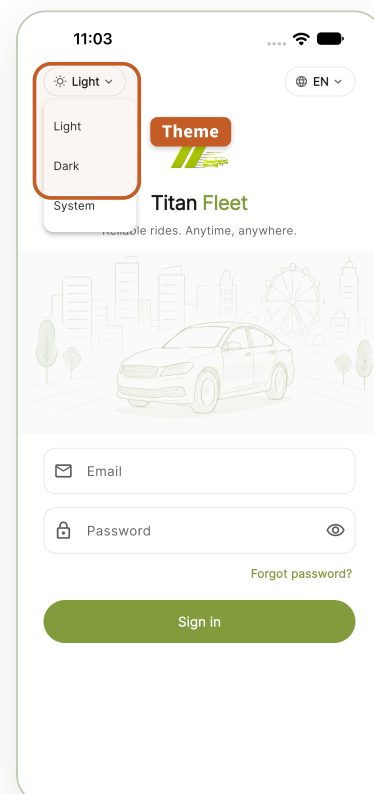

Theme (Light / Dark / System)

Set appearance before sign-in

The theme control at the top left opens Light, Dark, or System. Pick Light for the default bright UI, Dark for a dim UI, or System to follow the phone setting. You can change this again later after you are signed in.

TIP

Help center docs use Light as the default look; operators can still choose Dark on this screen.

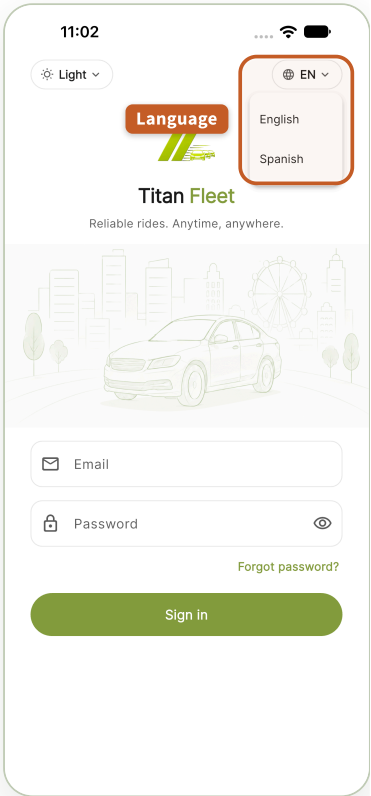

Language

EN and other locales

The language control at the top right (globe + code such as EN) lets you switch the Sign in UI language — for example English or Spanish — before you authenticate.

TIP

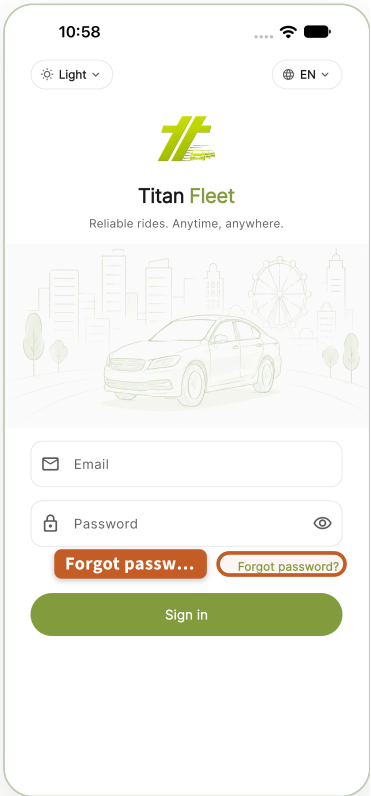

Change language here if the Sign in labels are not in the language you need.

Forgot password?

Start the reset flow

Tap **Forgot password?** under the password field to begin the three-step reset: fleet email → email OTP → new password.

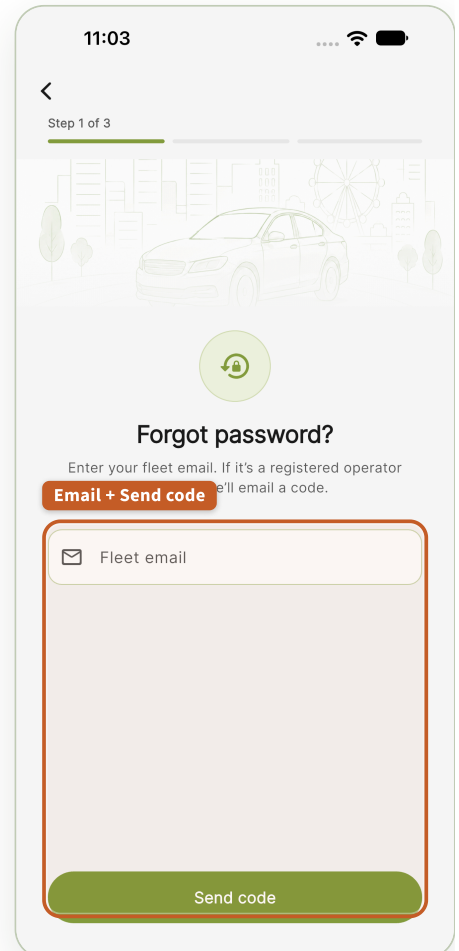

Forgot password

Reset your operator password in three steps: fleet email, email OTP, then a new password.

Start here · Email → OTP → new password (3 steps)

Steps

- 1 From Sign in, tap Forgot password?
- 2 Step 1 — enter your fleet email and tap Send code (registered accounts only).
- 3 Step 2 — enter the OTP from that email.
- 4 Step 3 — enter your new password on the same flow, then sign in with it.

Explore this screen

Step 1 — fleet email

Send code to a registered account

Step 1 of 3 asks for your fleet email. Enter the same operator email you use to Sign in. Send code emails a reset code only when that address is a registered operator account.

TIP

If no email arrives, confirm the address with your fleet admin and check spam.

11:03

<

Step 1 of 3

Forgot password?

Enter your fleet email. If it's a registered operator account, we'll email a code.

Fleet email

Fleet email

Send code

Step 2 — email OTP

Enter the code from your inbox

Step 2 of 3 asks for the 6-digit code from your fleet email. Type it into the boxes, then tap Verify. If no code arrives, check spam, confirm the address, or go back and try again.

TIP

Wait for the timer before Request new code. Use the newest code if you requested more than once.

10:44

<

Step 2 of 3

Enter code

If test@titantransfers.com is a fleet operator account, you'll receive a 6-digit code. If it isn't, no email will arrive.

For security we never confirm whether an email is registered. No code in your inbox? Check spam, address, or go back and try again.

Email OTP

Request new code in 27s

Verify

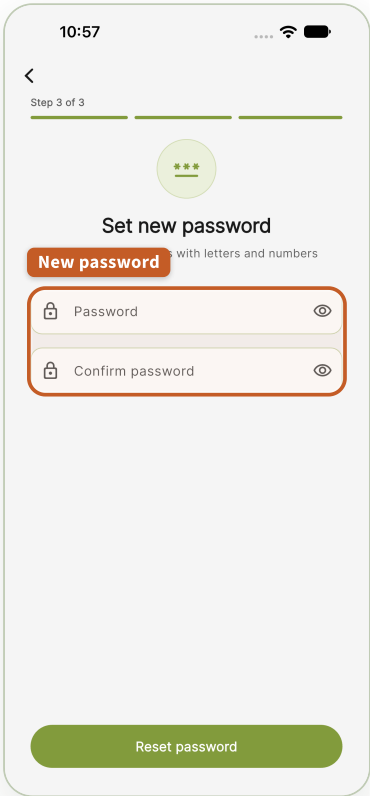

Step 3 — new password

Set password on the same flow

Step 3 of 3 is Set new password. Enter Password and Confirm password (at least 8 characters with letters and numbers), then tap Reset password. Sign in afterward with your fleet email and this new password.

TIP

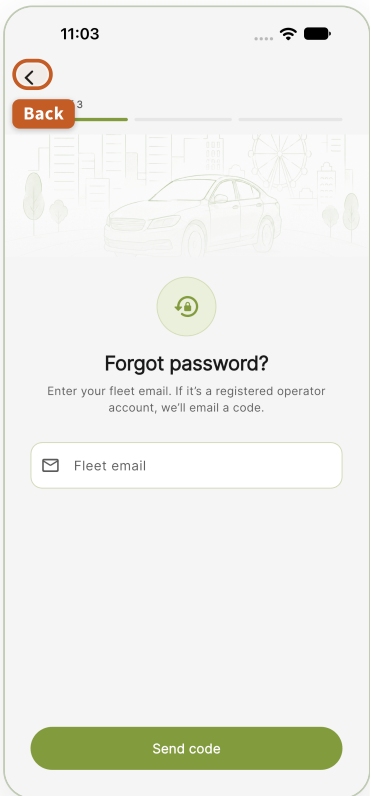

Choose a password you have not used recently for this operator account.

Back to Sign in

Cancel and return

Use the back control at the top left to leave the reset flow and return to Sign in without changing your password.

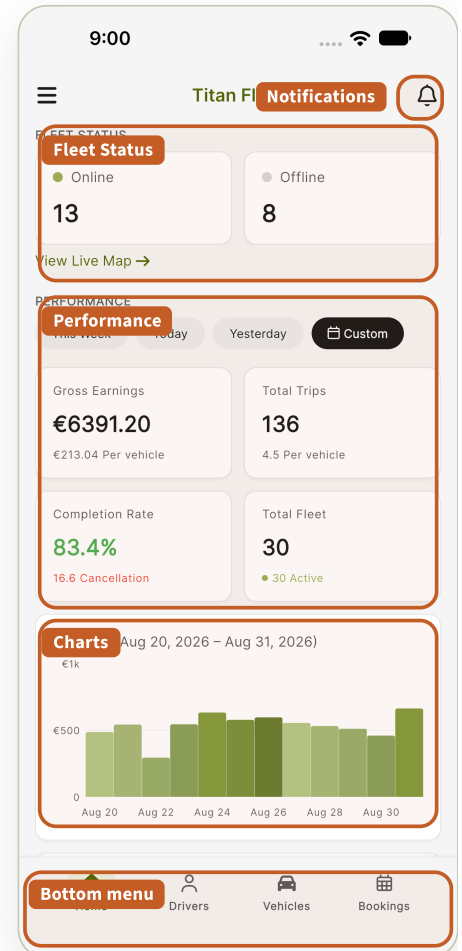

Home

See who is online, review Last Week performance by default, then open Online or Live Map when you need a driver.

Start here · Fleet status, Last Week performance

Steps

- 1 Open Home (bottom tab). Fleet Status shows Online and Offline counts, with View Live Map underneath.
- 2 Under Performance, Last Week is selected by default — KPI cards and charts match that week.
- 3 Switch to This Week, Today, or Yesterday when you need a different preset — or open Custom to pick one day or a specific date range.
- 4 Open Online (or Online drivers) to find a driver who is live right now, then tap their row for the full record.

Explore this screen

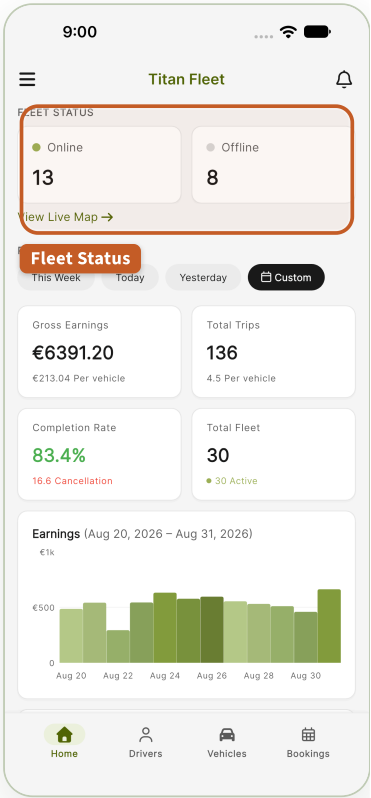

Fleet Status

Online / Offline + Live Map

At the top of Home, Fleet Status shows how many drivers are Online and Offline right now. Use View Live Map to see their live positions on the map.

TIP

Online here is a quick count. Open Online drivers or Live Map when you need to find a specific person.

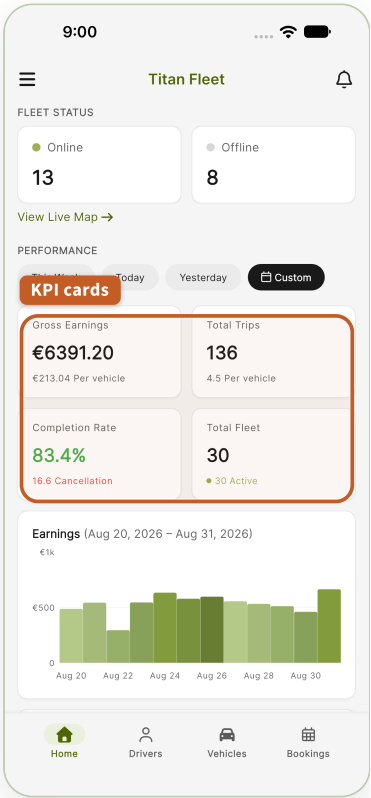

Earnings & trip cards

Money and rides at a glance

Home shows Gross Earnings (and per-vehicle), Total Trips, Completion Rate (with cancellations), and Total Fleet (with how many are Active). These numbers follow the Performance period — Last Week by default.

TIP

Completion Rate and cancellation % help you spot a rough week before you dig into Bookings.

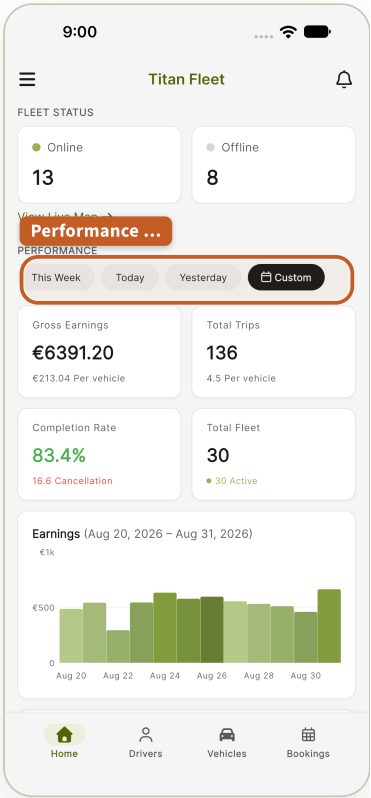

Last Week (default)

Home opens on last week

When you open Home, Performance defaults to Last Week. KPI cards, Earnings, and Trips charts all use that window until you change the chip. Confirm the date label on the charts (for example “Earnings (Aug 20, 2026 – Aug 31, 2026)”).

TIP

If numbers look wrong, check whether you still have Last Week selected — or whether Custom is still on from an earlier session.

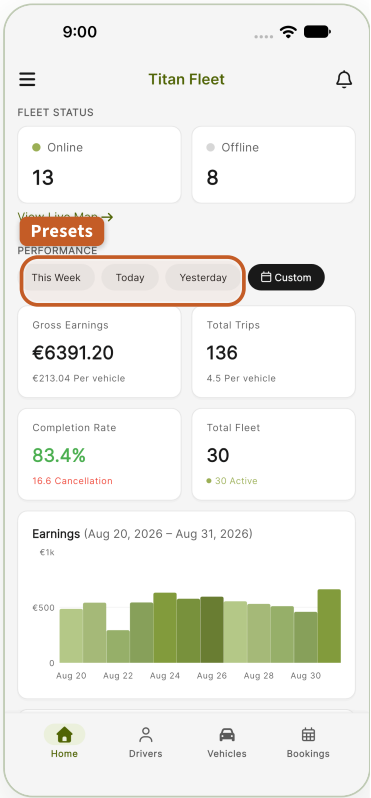

This Week / Today / Yesterday

Other quick presets

Tap This Week, Today, or Yesterday to jump to those windows without opening a date picker. Today and Yesterday drive hourly charts; week views roll performance up across days.

TIP

Use Today when you want hourly detail for the current day; use a week preset for the bigger trend.

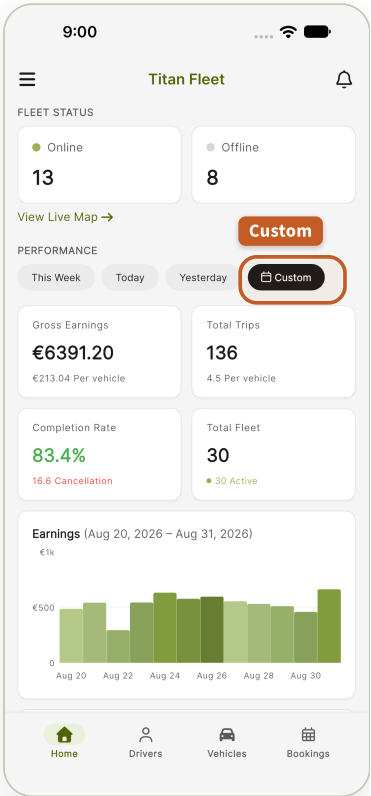

Custom (one day or dates)

Pick a day or a date range

Custom is the sub-option when presets are not enough. Open Custom to select a single day / specific date, or a from-to range. Charts and KPI cards refresh to match what you confirm. Bookings uses the same Custom idea on the funnel date filter.

TIP

Custom is for exact windows (one busy day, an event weekend, payroll week). Switch back to Last Week when you want the default again.

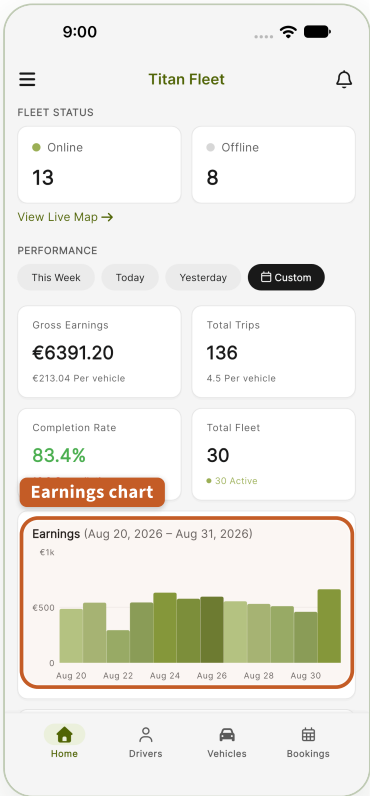

Earnings & trips charts

See when money and rides happened

On a single-day filter, Earnings and Trips break activity down by hour. On a week filter (including the Last Week default), charts show the day-by-day trend. Tap or scrub a bar/point for the exact amount or trip count.

TIP

If charts look empty, switch to a period that had trips, or pull to refresh.

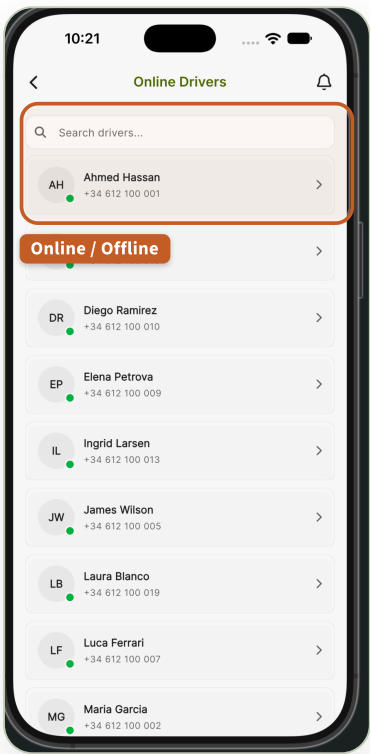

Online drivers from Home

See who is online, then search

From Home, open Online to list every driver who is currently online. You can search a specific driver there, then tap their row to open their profile — rides, money, documents, vehicles, and activate / deactivate.

TIP

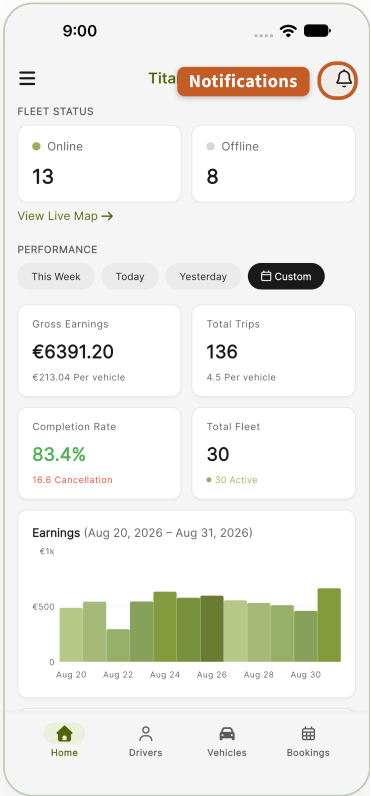

Online is for who is live right now. The full Drivers tab is the full roster (including offline).

Notifications bell

Alerts from the header

The bell on Home opens fleet notifications (new bookings, status changes, and similar alerts) without leaving the dashboard.

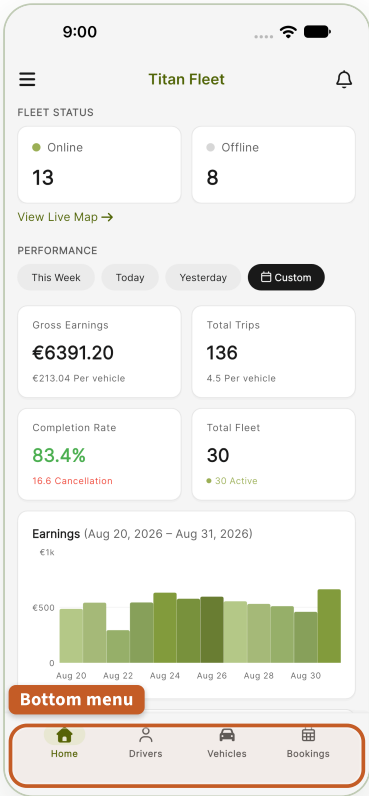

Bottom menu

Home, Drivers, Vehicles, Bookings

The bottom tabs switch the main areas of the app: Home (this dashboard), Drivers, Vehicles, and Bookings. Home stays selected while you are on this screen.

TIP

Use the hamburger (top left) for more destinations such as Live Map, Calendar, and Settings.

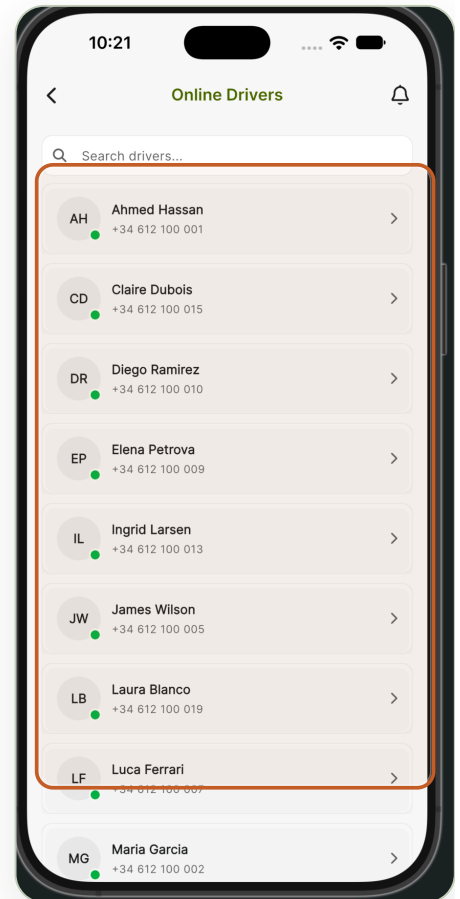

Online drivers

Review online drivers, search one person, and open their profile.

Start here · Who is online + search

Steps

- 1 From Home, open Online (Online drivers).
- 2 Scan the list — each row is a driver who is online (green dot on the avatar).
- 3 Use Search drivers... to find a specific person.
- 4 Tap a driver to open their record (rides, earnings, documents, vehicles, activate / deactivate).

Explore this screen

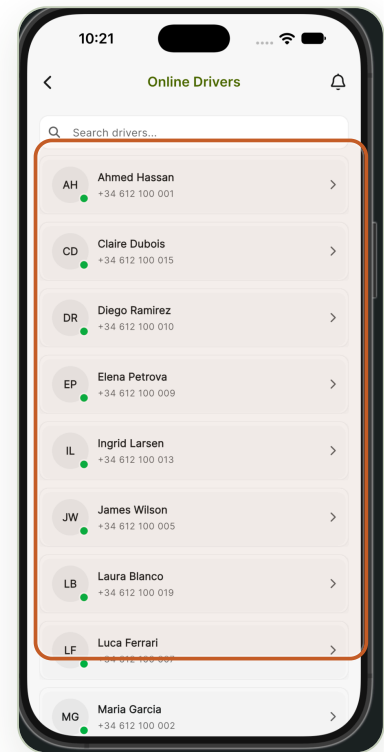

Online list

Only drivers who are online

This screen lists drivers who are currently online. Each card shows initials, name, and phone, with a green online indicator. It is not the full roster — offline drivers stay on the Drivers tab.

TIP

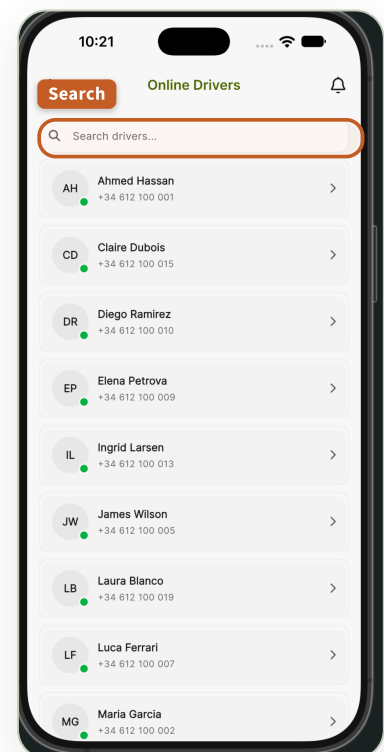

If someone should appear here but does not, ask them to open the driver app and check connectivity.

Search a driver

Find one person in the online list

Use Search drivers... at the top to filter the online list by name. Select the match to open that driver's profile.

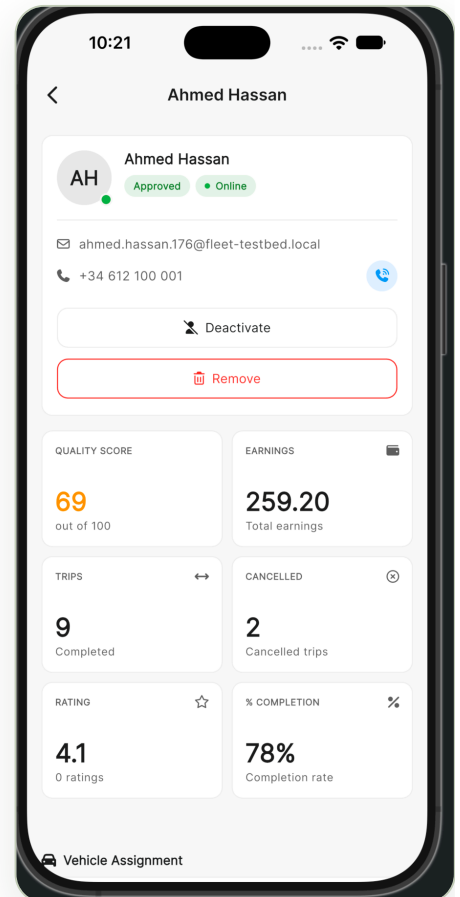

Driver profile

Review one driver's performance, upload documents, assign or unassign vehicles, and activate or deactivate them.

Start here · Records, docs, vehicles, status

Steps

- 1 Open a driver from Online drivers (or from the Drivers tab).
- 2 Review the header (Approved / Online) and performance cards — earnings, trips, cancellations, rating, completion.
- 3 Scroll to Vehicle Assignment to assign, unassign, check in, or check out vehicles.
- 4 In Documents, upload or replace files (JPG, PNG, or PDF, up to 10 MB per type) and wait for review where needed.
- 5 Use Deactivate / Activate (or Remove) when you need to change that driver's status.

Explore this screen

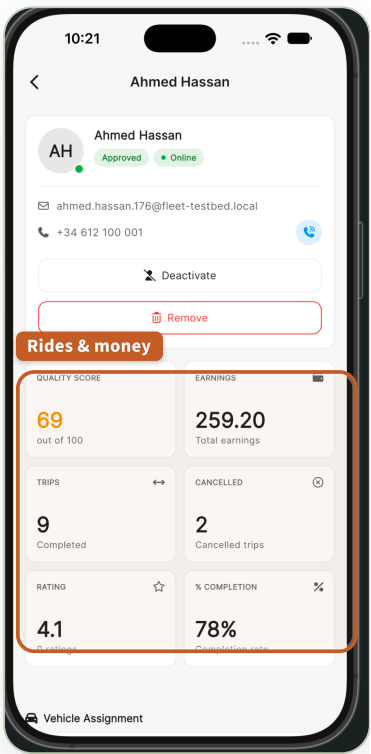

Rides & money records

What this driver earned and completed

The profile shows Quality Score, Total earnings, Completed trips, Cancelled trips, Rating, and Completion rate. Use these when you need that driver's performance — not only the fleet totals on Home.

TIP

Contact shortcuts (email / phone / call) sit in the header card.

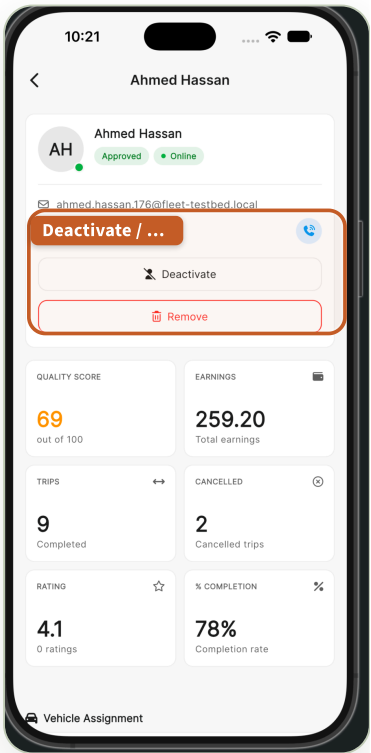

Activate / Deactivate / Remove

Change status for this driver

From the profile, tap Deactivate to take a driver out of active work, or Activate when they should work again. Remove permanently deletes them from the fleet when that is what you intend — confirm carefully.

WATCH OUT

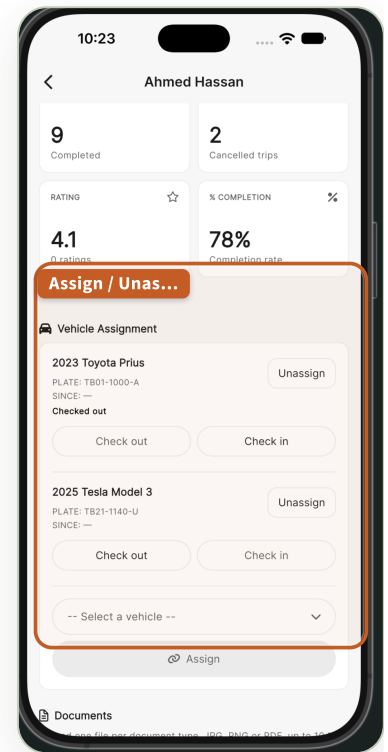

For several drivers at once, use multi-select on the Drivers tab instead.

Assign & unassign vehicles

Link cars to this driver

Under Vehicle Assignment, pick a vehicle from the list and tap Assign. For cars already linked, use Unassign, Check out, or Check in as needed. Keep assignments accurate so Bookings and Live Map reflect who is driving what.

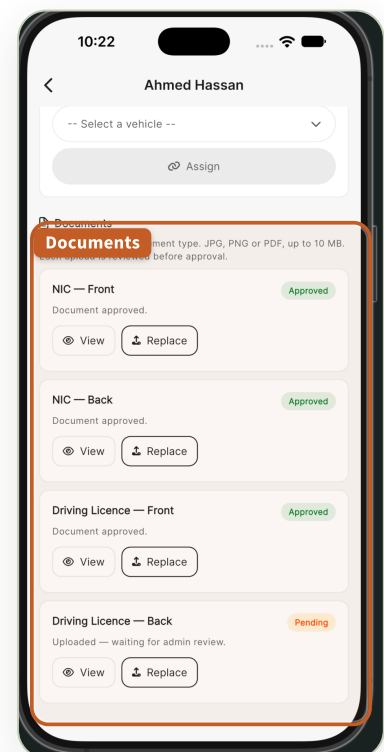

Upload documents

NIC, licence, and more at the bottom

The Documents section at the bottom of the same profile lets you upload one file per document type (JPG, PNG, or PDF, up to 10 MB). Each upload is reviewed before approval. Use View or Replace on items such as NIC Front/Back and Driving Licence Front/Back. Pending means uploaded and waiting for admin review.

TIP

Do not leave Pending docs forever — replace rejected files promptly.

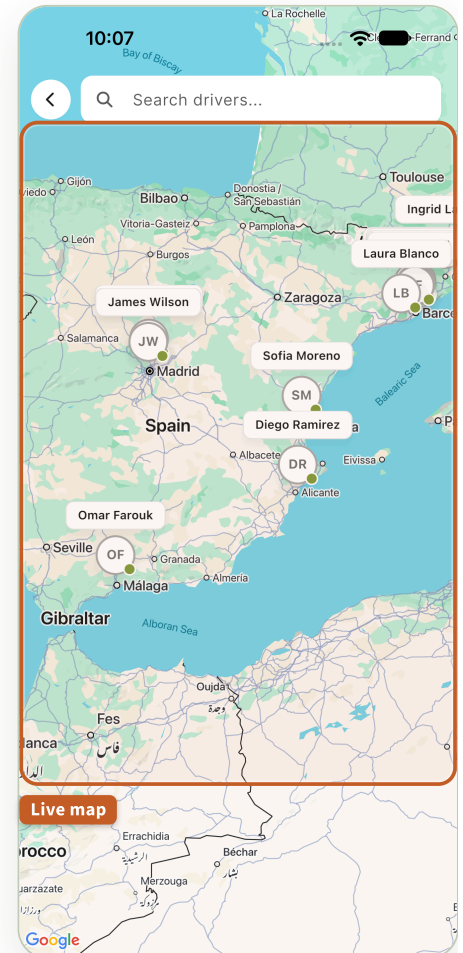

Live Map

See where your online drivers are right now, or search one driver to find them on the map.

Start here · Live driver locations + search

Steps

- 1 Open Live Map from Home (View Live Map) or from the side menu.
- 2 Pins appear for drivers who are online — each shows initials, name, and a green online dot.
- 3 Pan and zoom the map to scan the fleet's live locations.
- 4 To find one person, tap Search drivers..., type a name, and select them — the map focuses on that driver's live location.
- 5 Use back when you are done. Accept and assign still happen in Bookings.

Explore this screen

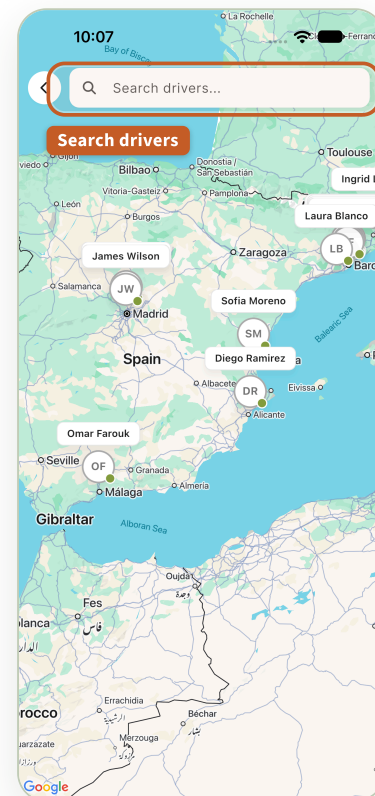

Search a specific driver

Find one person on the map

Use the Search drivers... field at the top to find a specific driver. Type their name, pick them from the results, and the map jumps to that driver's live location so you do not have to hunt across the whole map.

TIP

Search only helps for drivers who are currently showing on Live Map (online with a location).

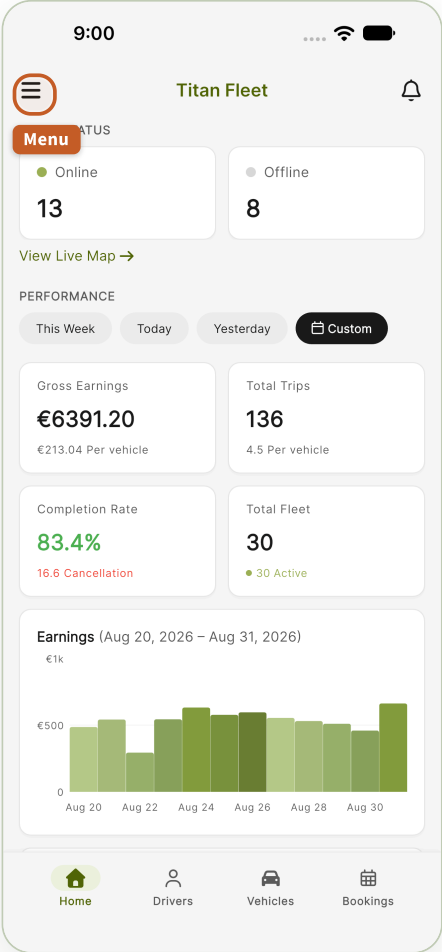

Side menu

Open the drawer for screens that are not on the bottom tabs.

Start here · Reach Greeters, Live Map, Settings...

Steps

- 1 Tap the hamburger (≡) at the top left of Home or other main tabs.
- 2 Scroll the drawer list to the screen you need.
- 3 Tap an item — Live Map, Greeters, Documents, Performance, Calendar, Earnings, Reports, or Settings.
- 4 Use the same hamburger (or back) to leave that screen.

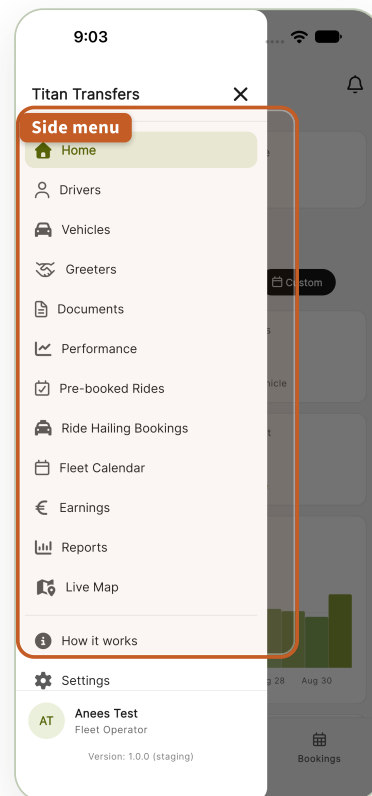

Explore this screen

Hamburger opens the drawer

Top-left menu control

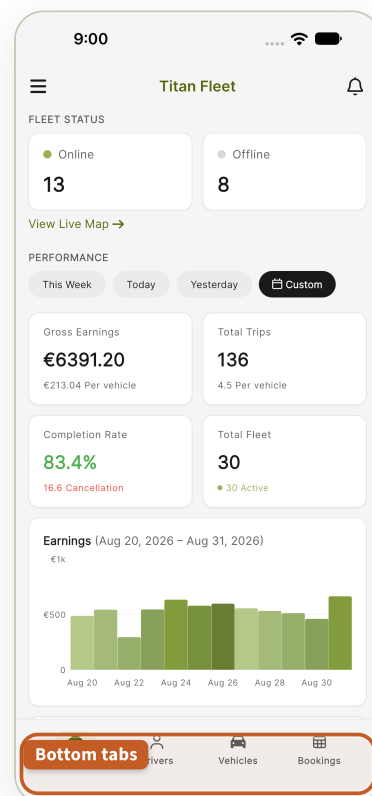

The three-line icon opens the side navigation. Bottom tabs cover Home, Drivers, Vehicles, and Bookings; everything else lives in this drawer. Typical items: Greeters, Documents, Performance, Calendar, Earnings, Reports, Live Map, Settings. Labels may vary slightly by app version, but the pattern is the same — secondary tools live here.

Drawer vs bottom tabs

When to use which

Use bottom tabs for daily fleet work (Home, Drivers, Vehicles, Bookings). Use the drawer for supporting tools and Live Map when you are not already on Home.

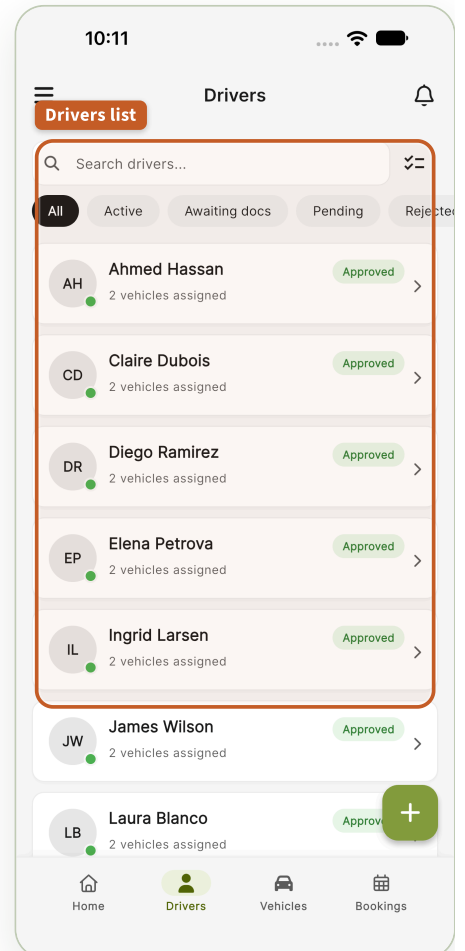

Drivers

Find drivers, activate or deactivate them (one or many), and add new drivers to the fleet.

Fleet setup · Search, multi-select, add

Steps

- 1 Open the Drivers tab on the bottom bar.
- 2 Search by name, or use status chips (All, Active, Awaiting docs, Pending, Rejected).
- 3 Long-press a driver to select them, then tap Deactivate or Reactivate — or use the control to the right of Search to turn on multi-select and pick several drivers at once.
- 4 Tap + to open Add Driver, fill the form, and Continue.

Explore this screen

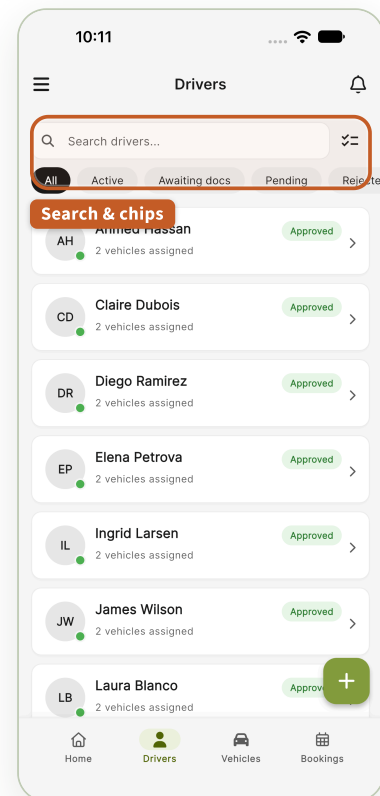

Search & status chips

Find and narrow the list

Use Search drivers... to find someone by name. Status chips (All, Active, Awaiting docs, Pending, Rejected) narrow the roster. Tap a card (when you are not in multi-select) to open that driver's details.

TIP

Green dots on avatars show drivers who are online.

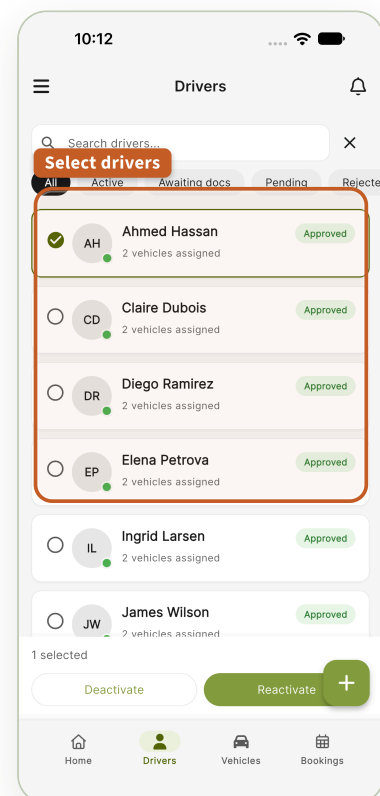

Long-press to select

Activate or deactivate quickly

Long-press a driver card to enter selection mode. The card gets a checkmark and a green outline. From the bar at the bottom, tap Deactivate or Reactivate for the selected driver(s).

TIP

Long-press is the fastest path when you only need one or two drivers.

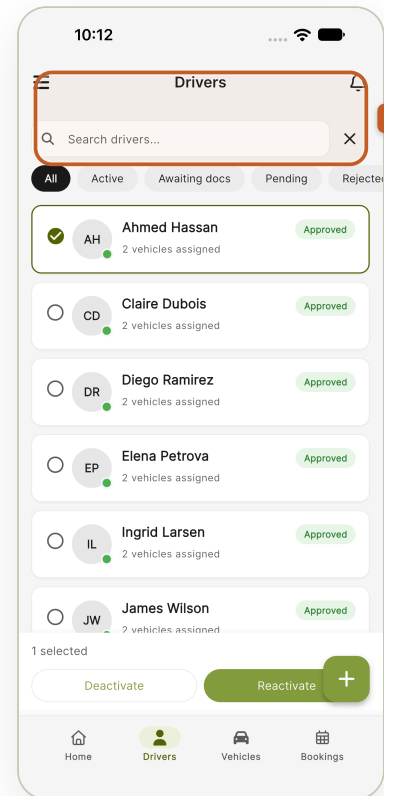

Multi-select (search-row button)

Select several drivers at once

Tap the control on the right of the search field to enable multi-select. Circles appear on each card so you can select several drivers, then Deactivate or Reactivate them together from the bottom bar.

TIP

The footer shows how many are selected (for example “1 selected”) before you confirm the action.

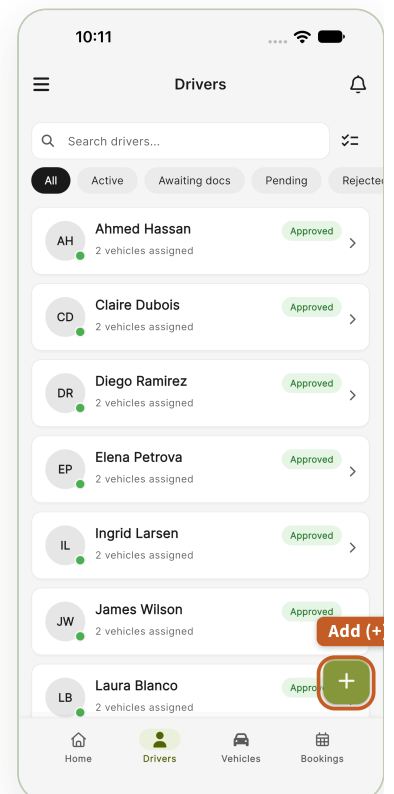

Add a new driver (+)

Open the Add Driver form

Tap the green + button to open Add Driver. Enter first name, last name, email, phone (with country code), and a temporary password (at least 8 characters), then Continue.

TIP

After you add them, they can appear in assign pickers and on Live Map once they are online.

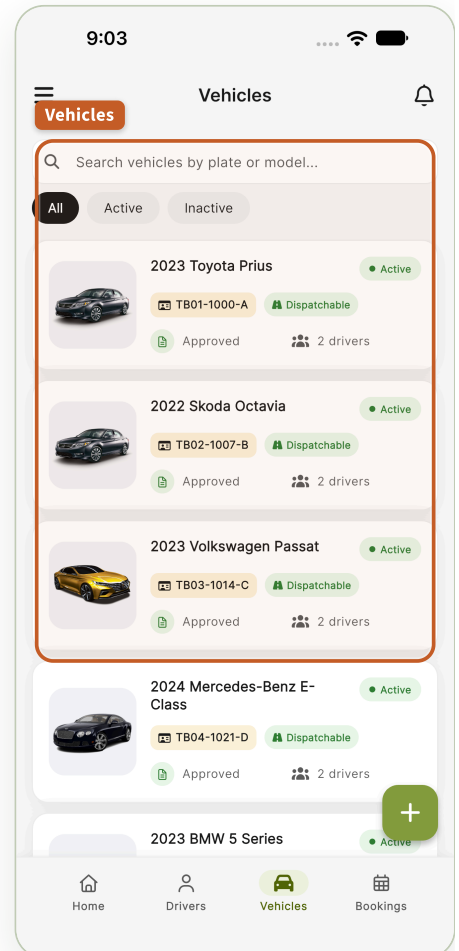

Vehicles

Maintain plate, type, and Active / Inactive status for assignable cars.

Fleet setup · Fleet cars and status

Steps

- 1 Open the Vehicles bottom tab.
- 2 Filter with All / Active / Inactive chips or search.
- 3 Tap a vehicle card to open Edit Vehicle — set Active / Inactive, edit details, manage documents, or delete.
- 4 Use + to register a new vehicle.

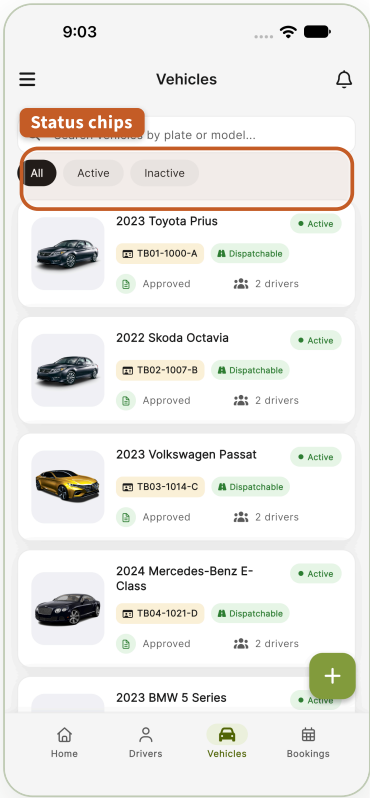

Explore this screen

Active / Inactive chips

Hide cars you cannot assign

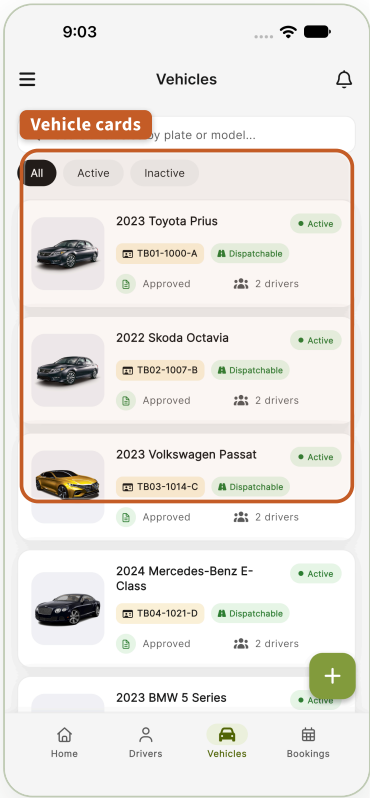

Inactive vehicles stay in history but should not be offered when assigning. Keep status honest so operators do not pick a car that is in the shop.

Vehicle cards

Plate and type on each row

Cards show plate, category, and status. Tap a card to open Edit Vehicle for full details.

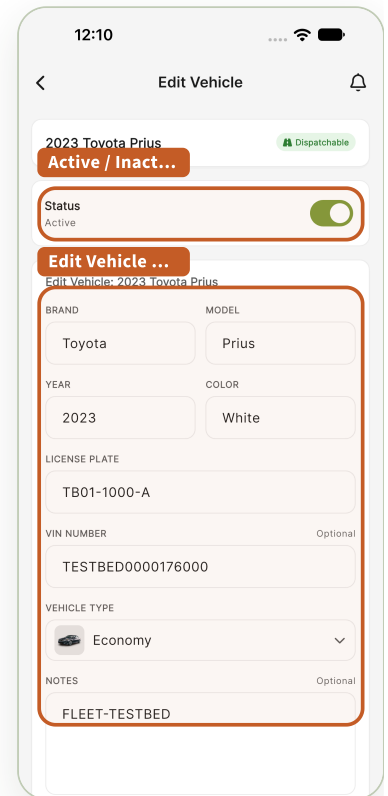

Active / Inactive status

Turn a car on or off for assign

On Edit Vehicle, the Status toggle sets Active or Inactive. Active cars can be assigned; Inactive stay in the list but should not be offered for trips. The Dispatchable badge shows whether the vehicle is ready for dispatch.

TIP

Flip Status off when a car is in the shop so nobody assigns it by mistake.

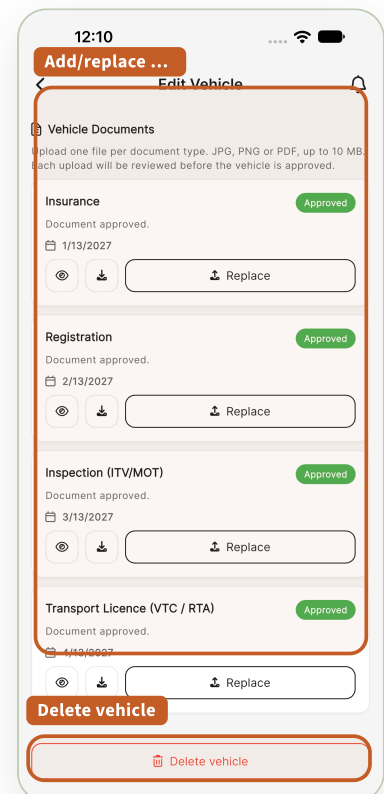

Upload vehicle documents

Attach files on Edit Vehicle

On Edit Vehicle, scroll to Vehicle Documents and Upload or Replace files (JPG, PNG, or PDF, up to 10 MB) for Insurance, Registration, Inspection, and Transport Licence. Those uploads then appear in side menu → Documents for View, Download, Remove, and status (Pending / Approved / Rejected). Delete vehicle at the bottom removes the car from the fleet — not a single document.

TIP

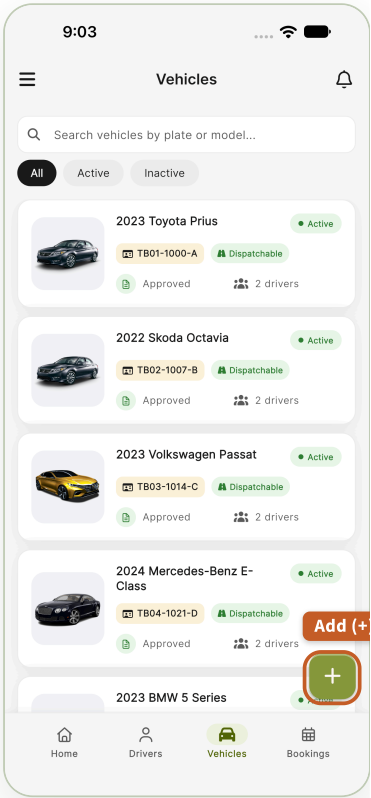

Use Documents hub to clear Pending and fix Rejected; use Edit Vehicle when you need to replace a file for that car.

Add vehicle (+)

Register plates for the fleet

Use + to add a vehicle with plate and type. New vehicles become selectable in the Assign flow once Active.

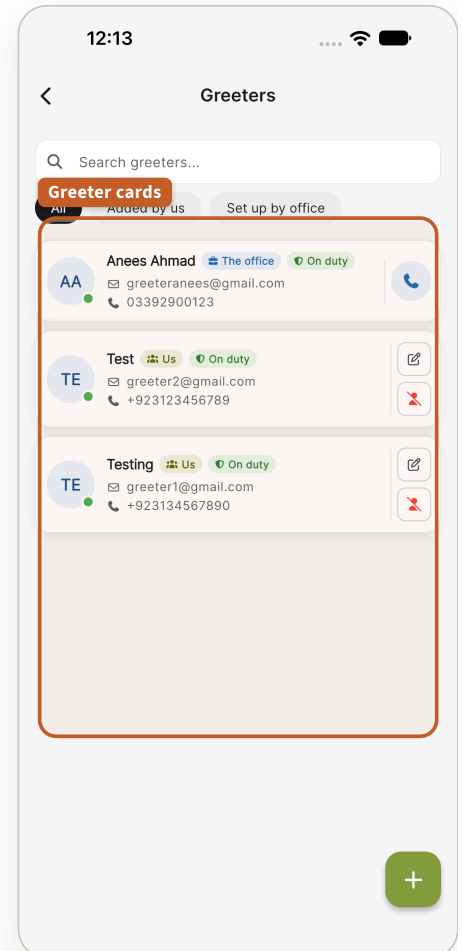

Greeters

Manage greeters you can attach when a booking needs meet-and-greet.

Fleet setup · Airport / meet-and-greet staff

Steps

- 1 Open the side menu → Greeters.
- 2 Browse or search the greeter list (All / Added by us / Set up by office).
- 3 On a greeter you manage, use Edit to update details or Deactivate to take them off duty for assign.
- 4 During Assign on a booking, pick a greeter when the trip requires one.

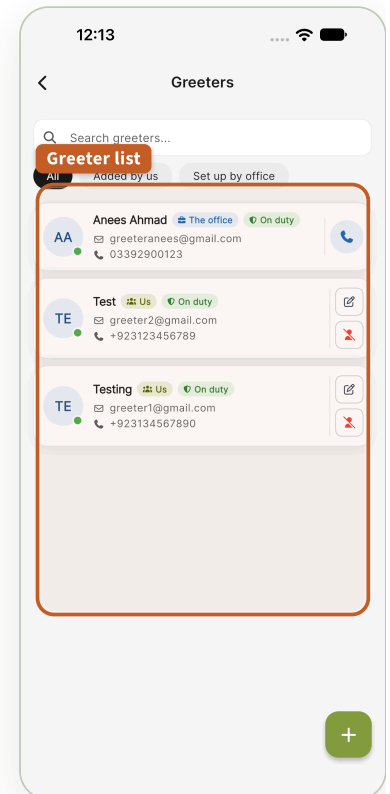

Explore this screen

When greeters are needed

Meet-and-greet bookings

Greeters are for trips that need someone at arrivals or a lobby — not every booking. Skip greeter selection when the customer only needs a driver and car.

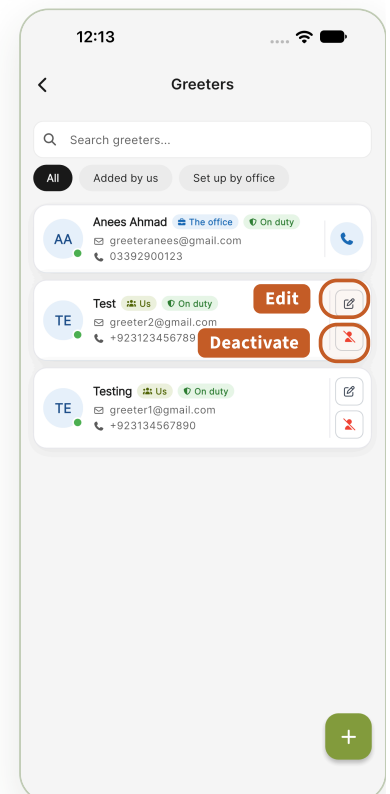

Edit & deactivate

Update or take a greeter offline

On greeters you manage (Added by us), each card shows Edit (pencil) and Deactivate (person with slash). Edit opens that greeter's profile to change details. Deactivate stops them being offered on Assign while keeping their record. Office-set greeters may only show a call button instead.

TIP

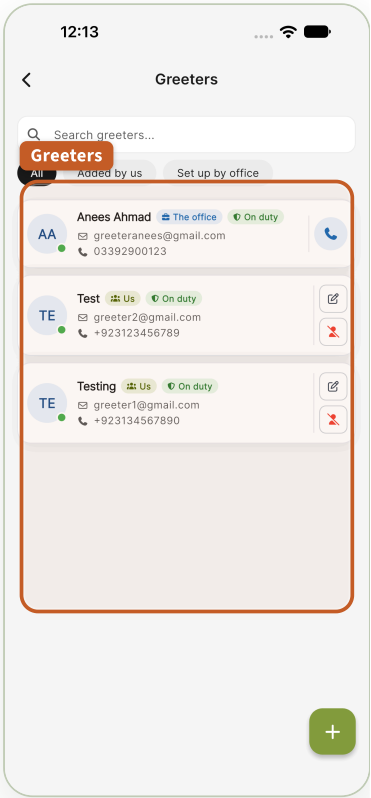

Deactivate when someone is unavailable so operators do not assign them by mistake.

Link on Assign

Pick greeter in Ride Details

After Accept (when required), Assign lets you choose driver, vehicle, and optionally greeter. Keep the Greeters list current so the picker is useful.

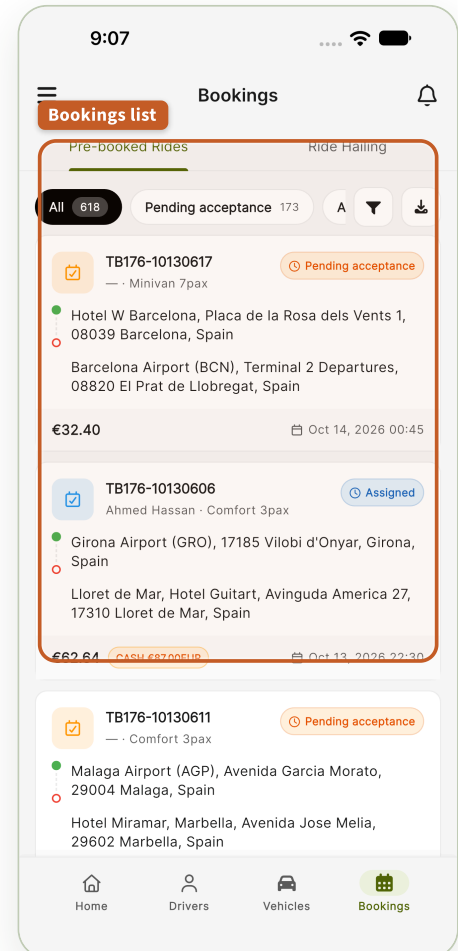

Bookings list

Find pending and upcoming bookings, then open Ride Details.

Bookings · Pre-booked trips & status chips

Steps

- 1 Open the Bookings bottom tab (Pre-booked).
- 2 Use status chips to focus Pending, Assigned, etc.
- 3 Optional: funnel / date filter to narrow the list.
- 4 Tap a booking card to open Ride Details.

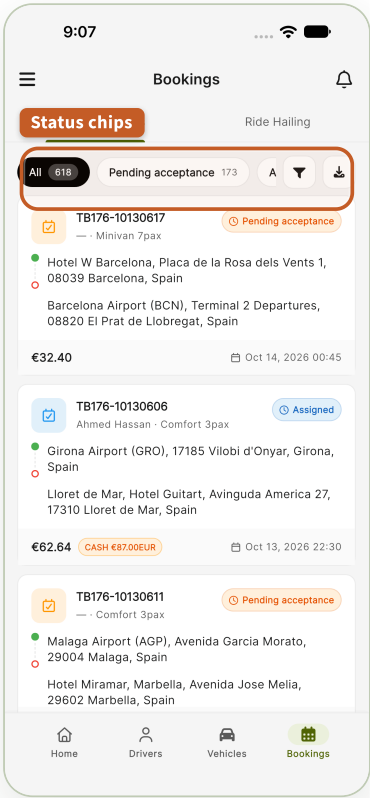

Explore this screen

Status chips

Pending, Assigned, and more

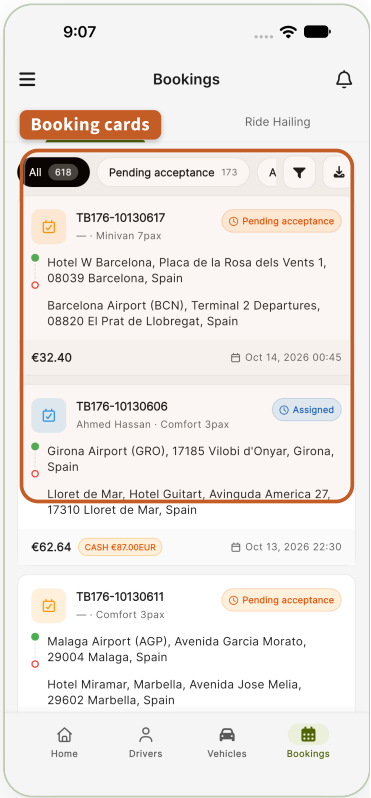

Chips filter the list by booking state. Start with Pending when you are clearing the queue; switch to Assigned to confirm who is on which trip.

Booking cards

Route and time on each row

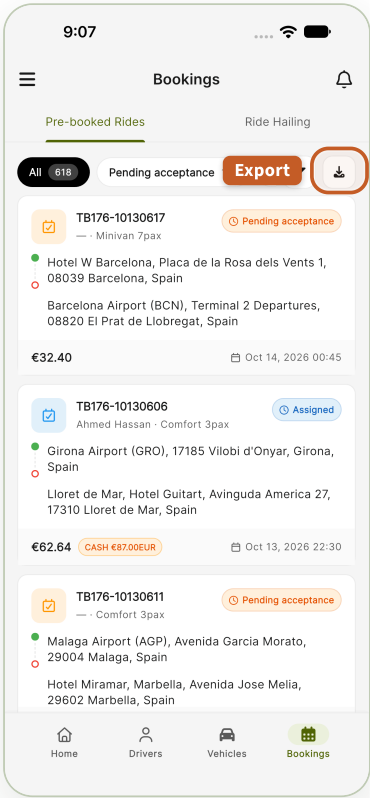

Each card summarizes pickup, drop-off, time, and status. Tap through for income, Reject, Accept, and Assign actions.

Export

Share or download the list view

Where shown, export pulls the current filtered list for sharing or records. Filters apply before export — set chips and date first.

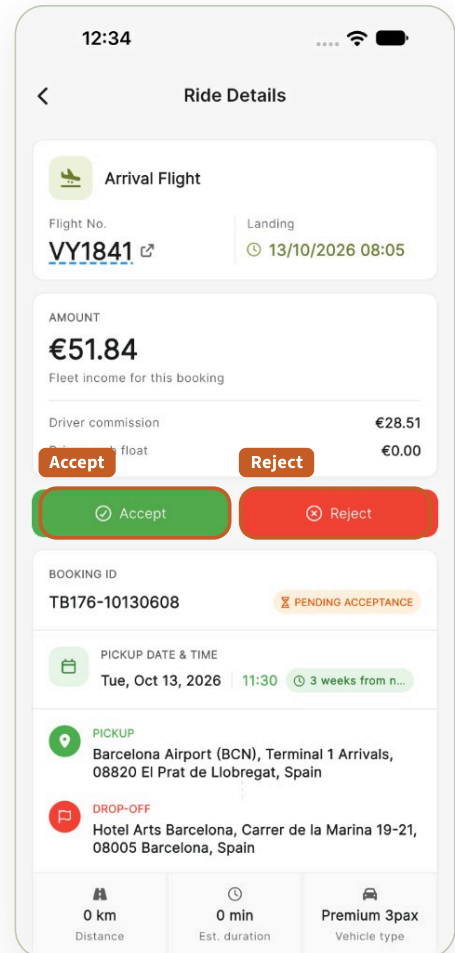

Accept & Assign

Accept a pending booking, then assign driver, vehicle, and greeter.

Bookings · Accept before Assign; Reject if needed

Steps

- 1 From Bookings, open a pending booking (Ride Details).
- 2 Review route, time, and fleet income amount.
- 3 Accept when your fleet will take the trip — before Assign.
- 4 Tap Assign and choose driver, vehicle, and greeter if required.
- 5 Use Reject only when you will not take the booking.

Explore this screen

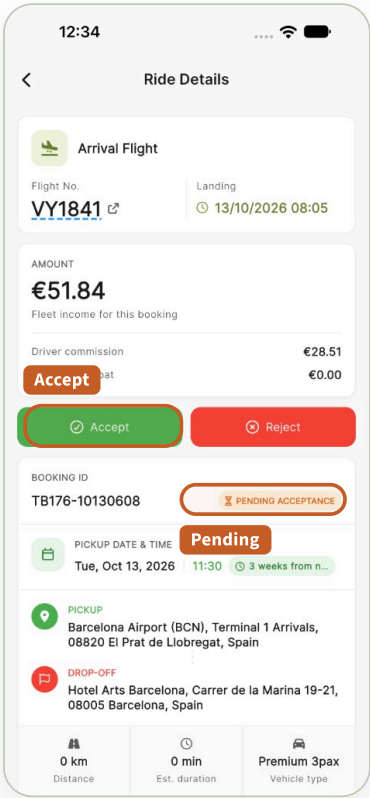

Accept before Assign

Order matters

When Ride Details shows PENDING ACCEPTANCE, tap Accept (green) so your fleet claims the trip. Assign comes after — picking driver, vehicle, and greeter. You cannot finish crew assignment until the booking is accepted when the UI requires it.

TIP

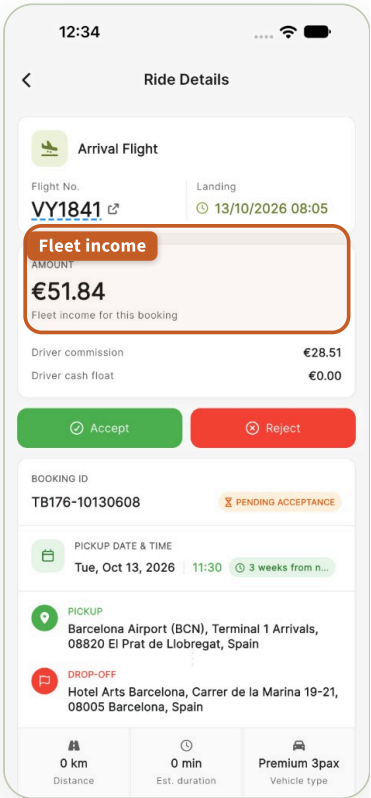

Accept and Reject sit side by side above the booking card. Use Accept when you will fulfill the trip.

Fleet income amount

What the fleet earns on this trip

The AMOUNT card shows fleet income for this booking (with driver commission and cash float underneath). Confirm it matches your commercial expectation before Accept.

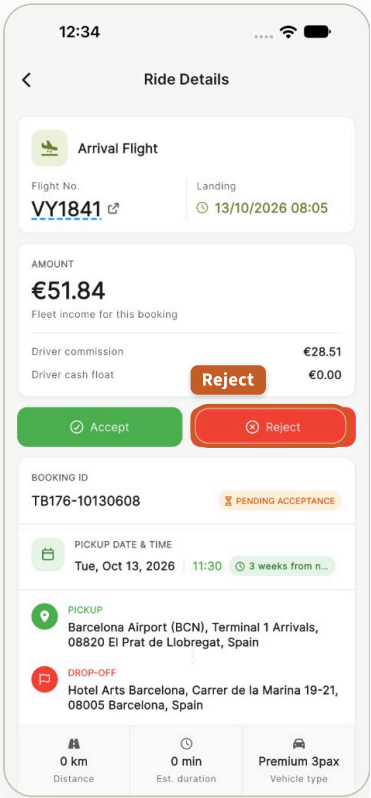

Reject

Decline the booking for your fleet

Reject (red) releases the booking when you cannot or will not fulfill it. Use it sparingly — it is final for your fleet on that offer. Prefer Accept + Assign when you have capacity.

WATCH OUT

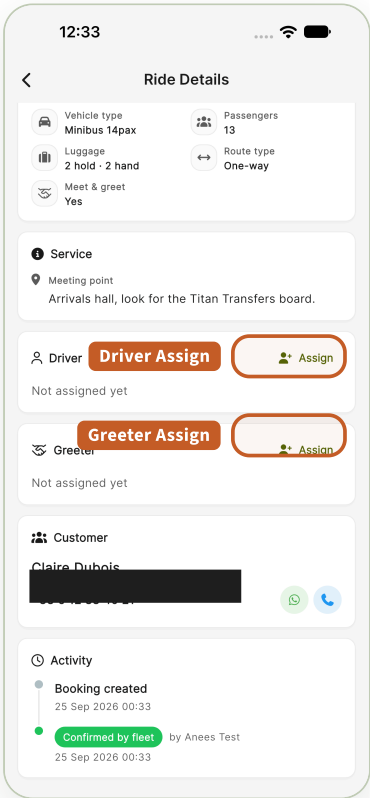

Double-check date/time and location before rejecting.

Assign driver / vehicle / greeter

Complete the crew for the trip

On Ride Details, use + Assign next to Driver and Greeter (when meet-and-greet is required). Pick an online, nearby driver when possible (check Live Map first). Assign also covers vehicle selection in the picker flow — confirm the plate matches the car that will show up.

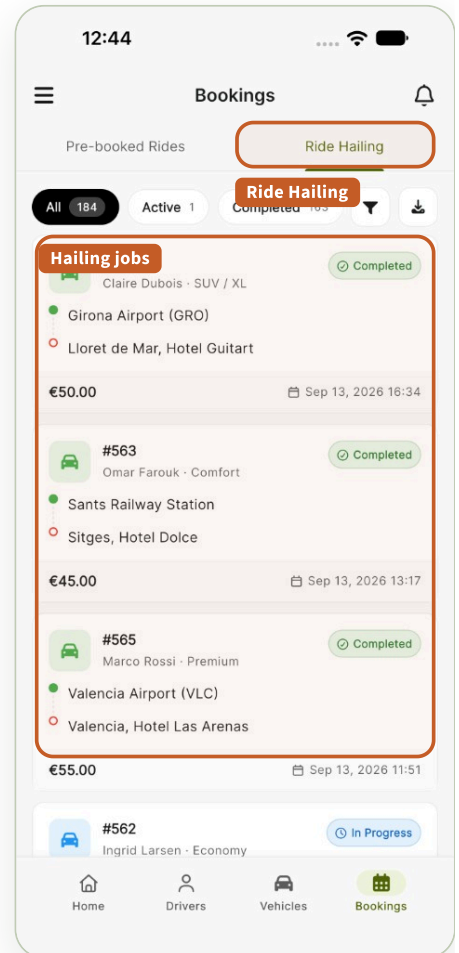

Ride hailing tab

Switch Bookings to on-demand ride-hailing jobs when your fleet handles them.

Bookings · On-demand vs pre-booked

Steps

- 1 Open Bookings.
- 2 Switch from Pre-booked Rides to the Ride Hailing tab.
- 3 Use All / Active / Completed chips to focus the list.
- 4 Open a job card → Accept / Assign as required.

Explore this screen

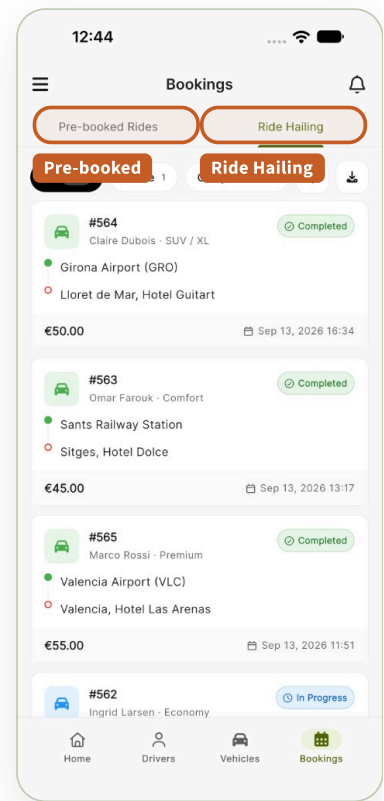

Pre-booked vs Ride Hailing

Two lists under Bookings

On Bookings, Pre-booked Rides holds scheduled transfers; Ride Hailing holds on-demand jobs. Status chips (All, Active, Completed) and cards work the same pattern — check both tabs before assuming a trip is missing. Open a card for Ride Details (income, Accept / Assign).

TIP

Timing is tighter on hailing — use Live Map for nearby online drivers before you assign.

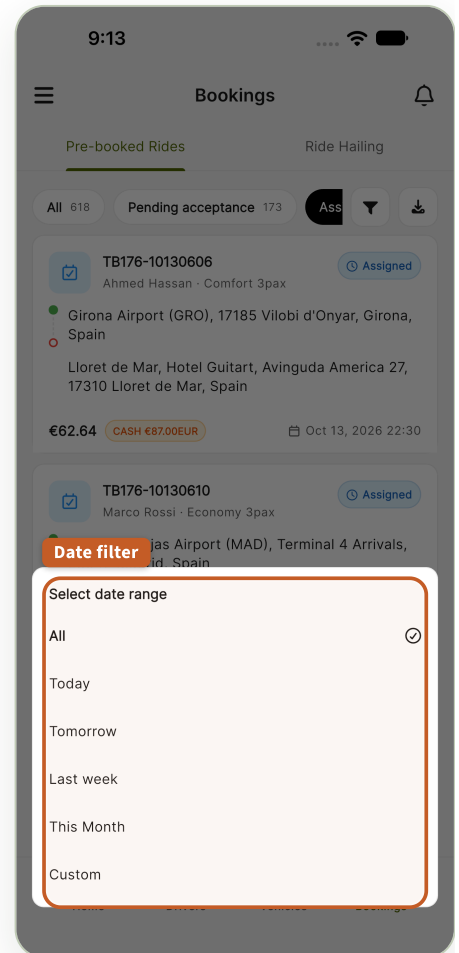

Date filter (funnel)

Narrow Bookings (and similar lists) by date without losing your place.

Bookings · Funnel presets to narrow the list

Steps

- 1 On Bookings, tap the funnel icon.
- 2 Pick a preset (Today, This week, ...) or Custom if needed.
- 3 Apply to refresh the list.

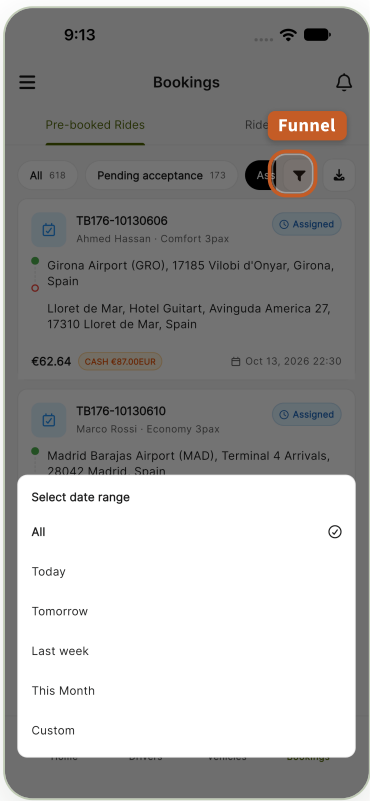

Explore this screen

Funnel icon

Opens the filter sheet

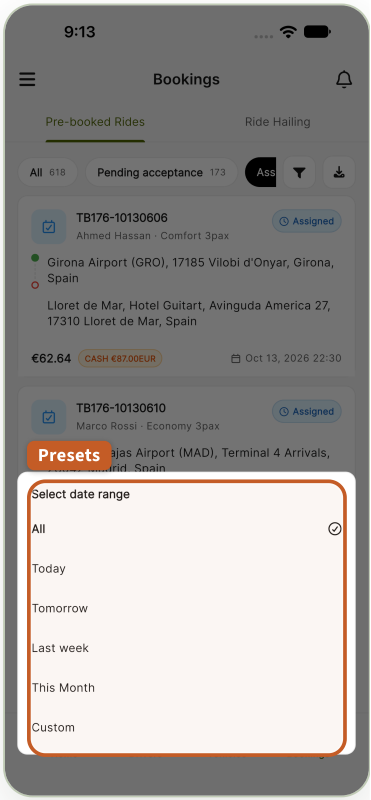

The funnel control on list screens opens the filter sheet. Date options live here alongside any other filters your build exposes.

Presets

Today, week, and similar

Presets are one-tap ranges for common operator windows. Prefer a preset when it matches how you work the queue — faster than Custom.

Performance

Review fleet KPIs and per-driver performance for a chosen period.

More screens · Period, KPIs, and per-driver stats

Steps

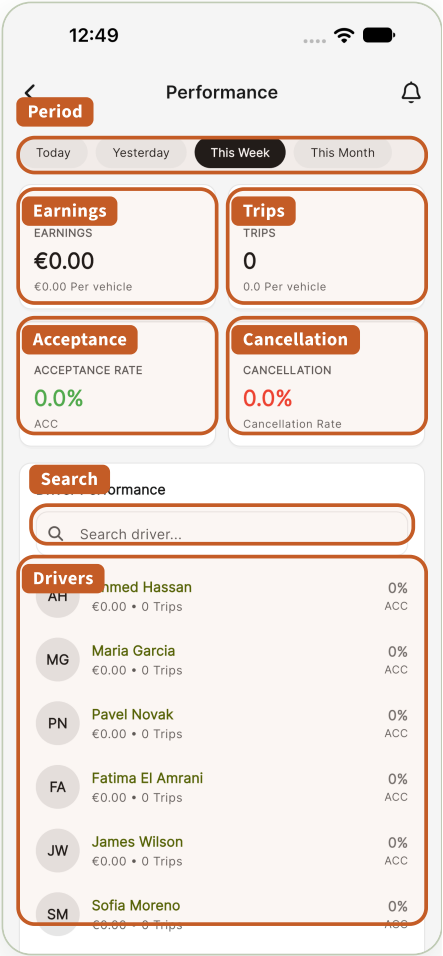

- 1

Open side menu → Performance (or use Home for a quick snapshot).
- 2

Pick Today, Yesterday, This Week, or This Month.
- 3

Read Earnings, Trips, Acceptance Rate, and Cancellation.
- 4

Search or scroll Driver Performance for individual ACC / trips.

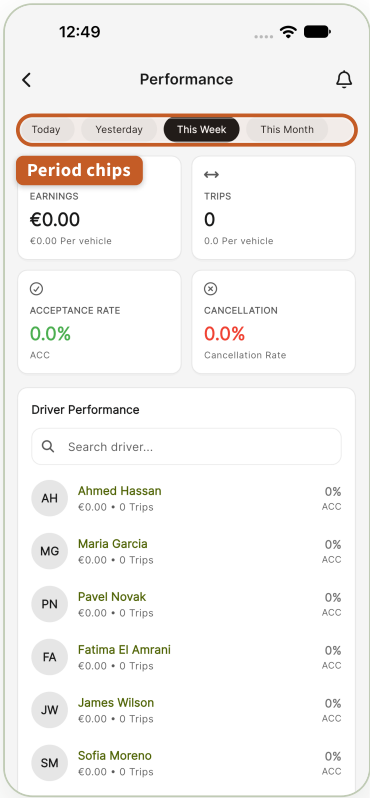

Explore this screen

Pick the period first

Numbers follow the range

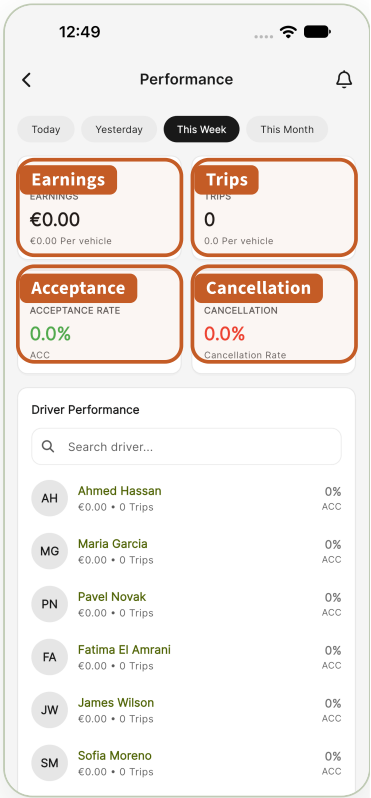

Use Today, Yesterday, This Week, or This Month at the top. Always set the window before judging trends — comparing Today to This Month without noticing will mislead staffing decisions.

Fleet KPI cards

Earnings, trips, ACC, cancellations

The four cards summarize the selected period: Earnings (with per-vehicle), Trips (with per-vehicle), Acceptance Rate (ACC), and Cancellation Rate. Green ACC and red cancellation make quick health checks easy.

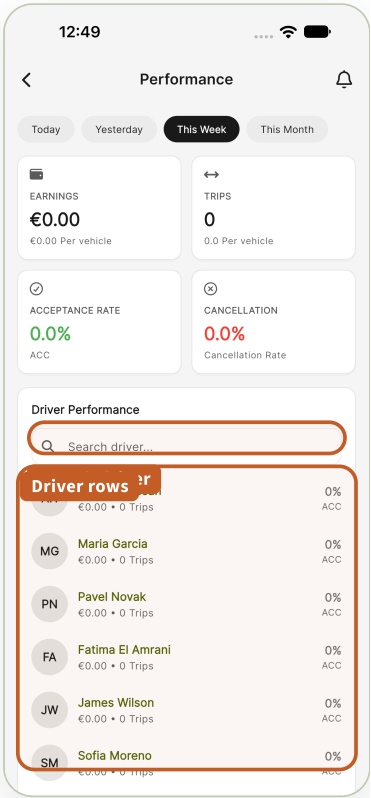

Driver Performance list

Search and per-driver ACC

Below the cards, search by name or scroll the list. Each row shows earnings, trip count, and that driver’s acceptance rate (ACC) for the same period.

TIP

Home is a compact snapshot; this screen is for longer review without the rest of the dashboard chrome.

Calendar

See bookings laid out by day so you can spot busy slots and open that day's jobs.

More screens · Heat map of busy days and day detail

Steps

- 1

Open side menu → Calendar (Fleet Calendar).
- 2

Use All / Pre-booked / Ride Hailing to focus the month.
- 3

Read the colour heat map — pinker days are busier.
- 4

Tap a day for List / By hour, the hourly bars, and job cards.

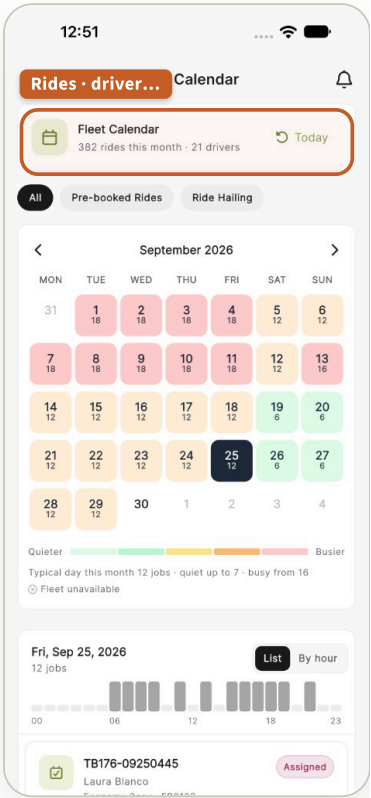

Explore this screen

Month summary & Today

Rides and drivers at a glance

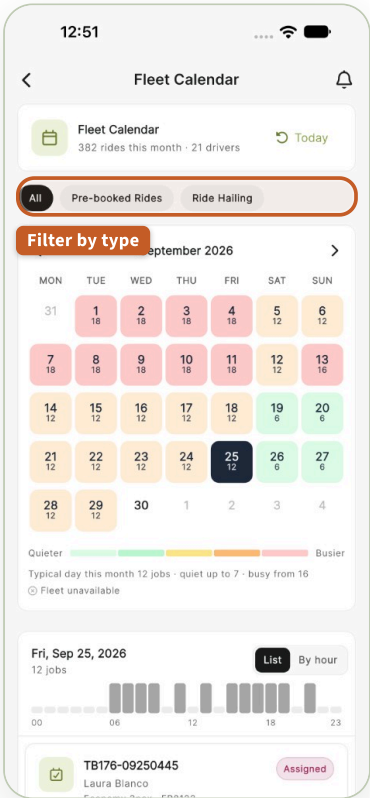

The top card shows rides this month and how many drivers are in play. Tap Today to jump back to the current date after browsing other months.

All / Pre-booked / Ride Hailing

Filter what the month shows

Switch tabs to show all jobs, only pre-booked transfers, or only ride-hailing. The heat map and day list update to match.

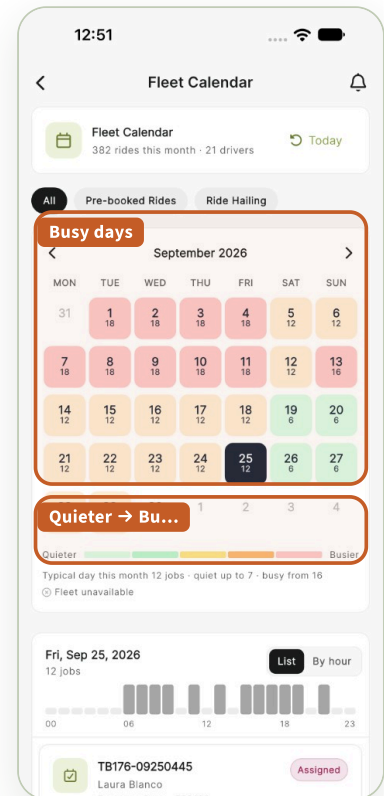

Spot busy slots

Colour heat map of the month

Each day cell shows the job count. Colours run quieter (green) → busier (pink). Dense days mean you need more online drivers — cross-check Live Map before accepting more volume.

TIP

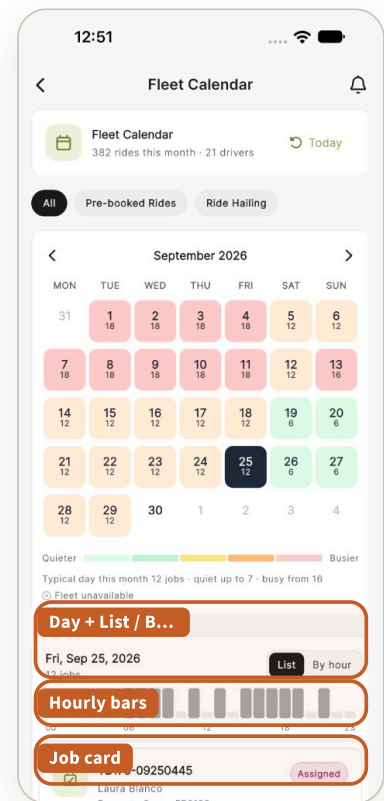

The legend under the grid explains typical / quiet / busy thresholds for this month.

Day detail & job cards

List, By hour, then open a trip

Tap a day to open its panel: job count, List vs By hour, hourly bars (peak times), and booking cards. Tap a card toward Ride Details for Accept / Assign when needed. Calendar is for time layout; Bookings list is better for status chips.

Documents

Review every driver and vehicle document in one place — status, view, download, or remove.

More screens · Driver & vehicle docs hub

Steps

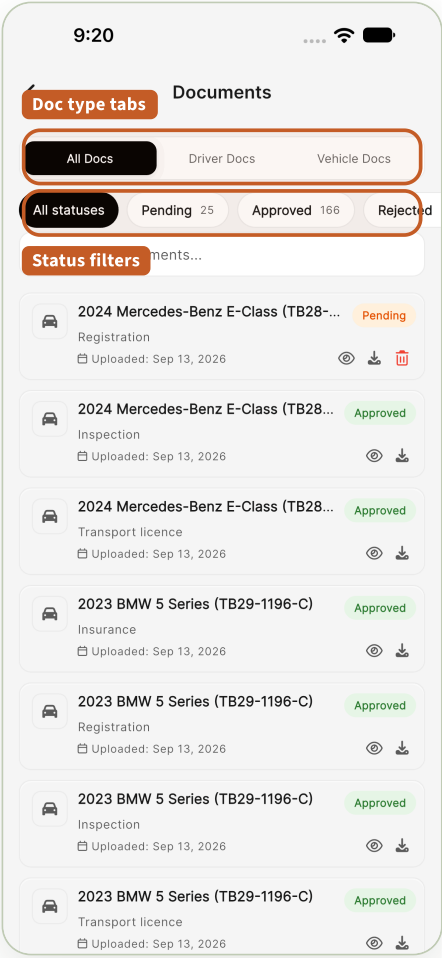

- 1

Open side menu → Documents.
- 2

Use All Docs / Driver Docs / Vehicle Docs to switch the list.
- 3

Filter by All statuses, Pending, Approved, or Rejected — or Search documents...
- 4

On a card: View, Download, or Remove (when available). Uploads happen on the driver profile or Edit Vehicle; everything shows up here.

Explore this screen

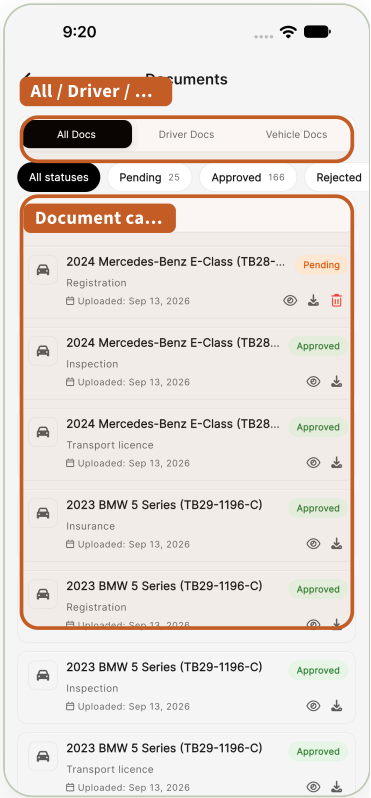

All / Driver / Vehicle docs

One list for every upload

Documents is the hub for paperwork uploaded on a specific driver or vehicle. Switch All Docs, Driver Docs, or Vehicle Docs to focus the list. You do not upload here first — you upload on the driver profile or Edit Vehicle, then review everything here.

TIP

Start with All Docs when you are not sure which person or car a file belongs to.

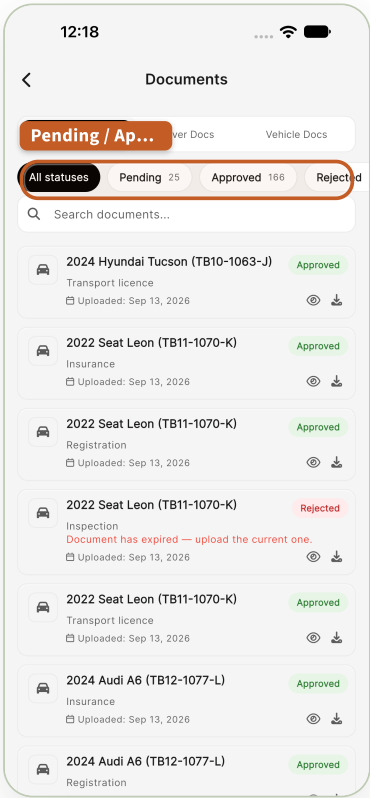

Pending / Approved / Rejected

See review status at a glance

Status chips filter the list: Pending (waiting for review), Approved, or Rejected. Rejected cards often show why (for example an expired file) so you know to upload a current one on that driver or vehicle.

TIP

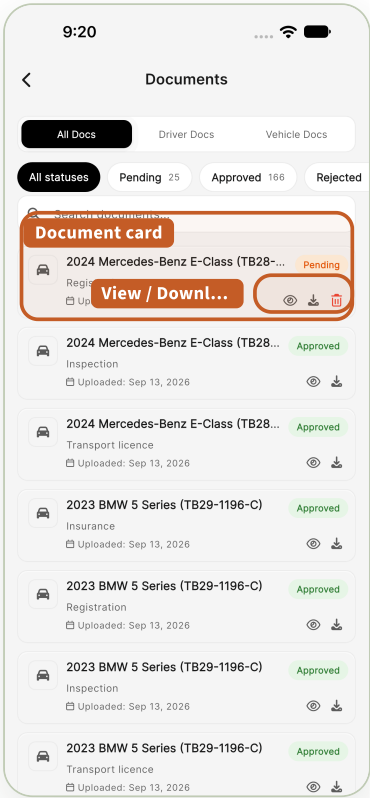

Pending counts help you clear the review queue before busy shifts.

View, download, remove

Act on a document card

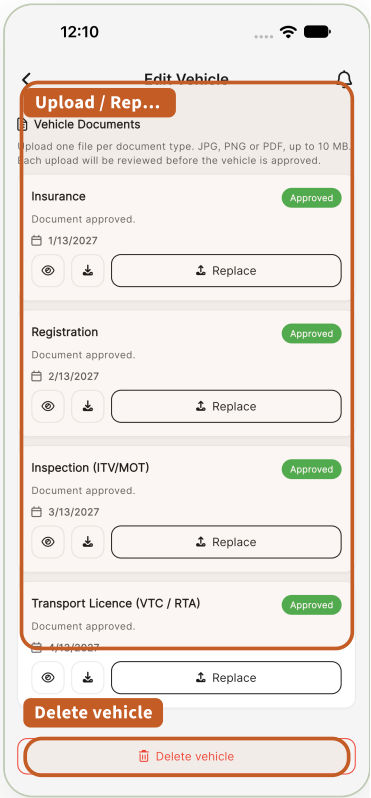

Each card shows the person or vehicle, document type, upload date, and status. Use the eye to View, the tray icon to Download, and the trash to Remove when that action is offered (often on Pending). Approved cards usually keep View and Download.

Where to upload

Driver profile or Edit Vehicle

Upload or Replace files on the driver profile (driver docs) or Edit Vehicle → Vehicle Documents (car docs: insurance, registration, inspection, transport licence). After upload, they appear in this Documents list for status and review.

Earnings

Filter a date range, read fleet end balance, and open per-driver statements.

More screens · Period, end balance, per-driver statements

Steps

- 1

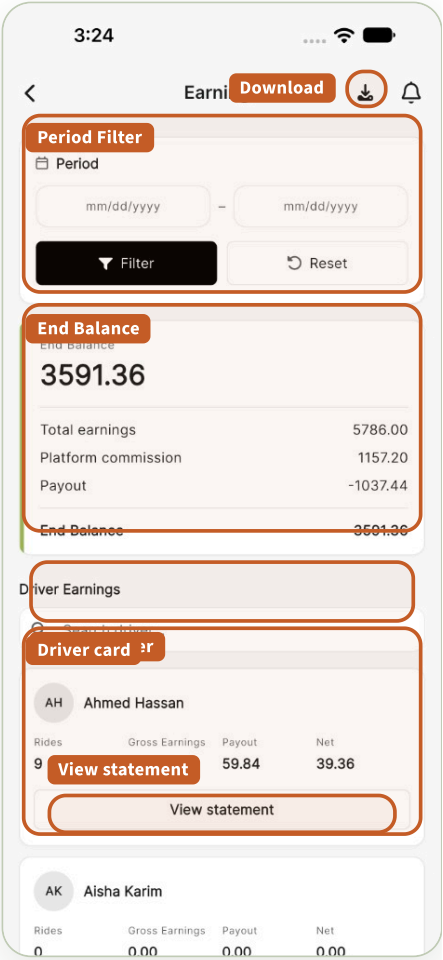

Open side menu → Earnings.
- 2

Set from / to dates, then Filter (or Reset to clear).
- 3

Read End Balance — total earnings, platform commission, and payout.
- 4

Search a driver and tap View statement when you need the detail line.
- 5

Use the download icon in the header to export when available.

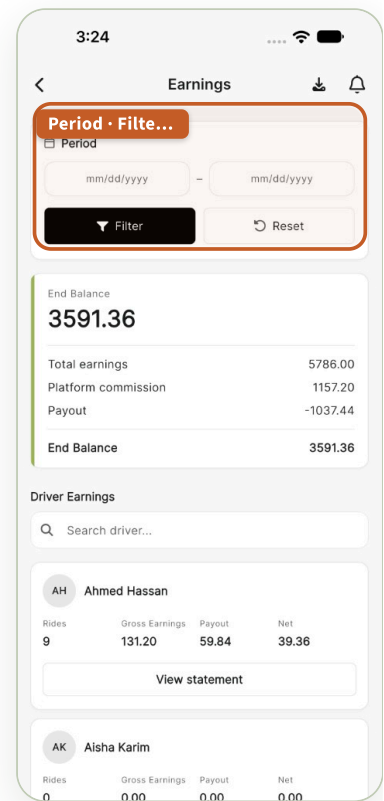

Explore this screen

Period Filter & Reset

Pick the money window

Enter from and to dates (mm/dd/yyyy), then tap Filter. Reset clears the range so you are not reconciling against a stale window. Match this period to Reports when you reconcile.

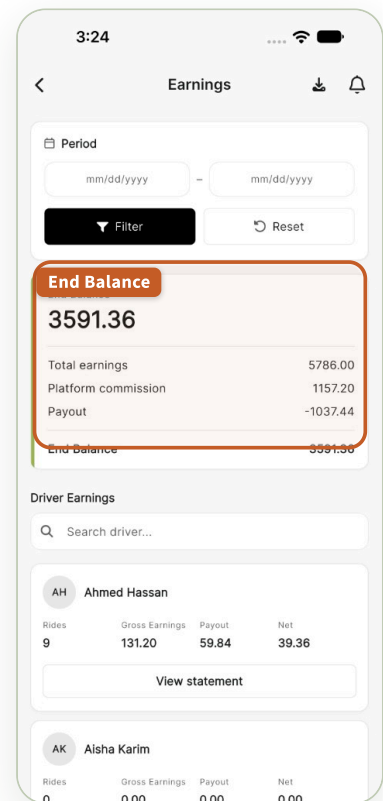

End Balance breakdown

Earnings, commission, payout

The green-accent card shows End Balance for the filtered period, with Total earnings, Platform commission, and Payout underneath. Ride Details income is per trip; this card rolls the fleet period together.

TIP

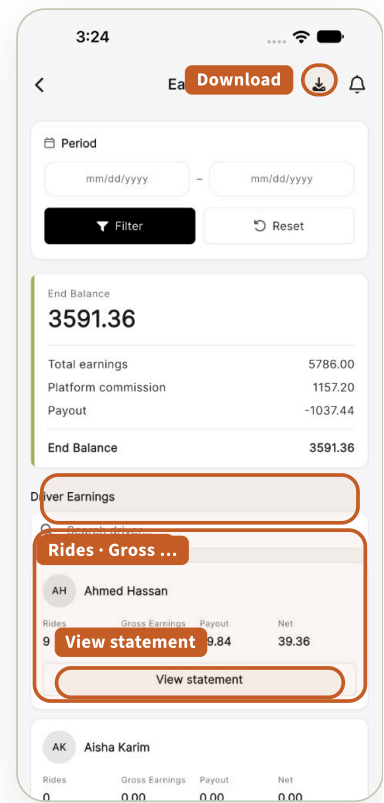

Investigate gaps by filtering Bookings for the same dates.

Driver Earnings & statements

Search, then View statement

Each driver card shows Rides, Gross Earnings, Payout, and Net for the period. Search by name, then tap View statement for that driver’s breakdown. Use the header download when you need an export.

Reports

Choose a report type and date range, then generate and download a CSV.

More screens · Pick type, dates, download CSV

Steps

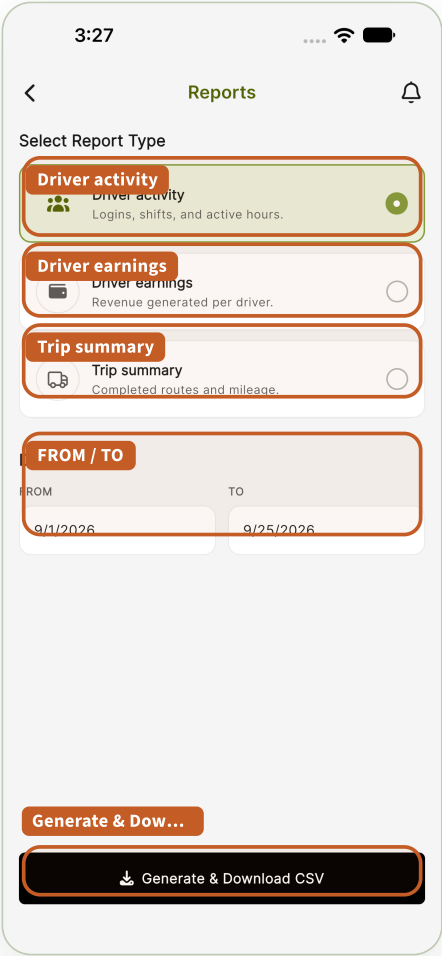

- 1

Open side menu → Reports.
- 2

Select Driver activity, Driver earnings, or Trip summary.
- 3

Set FROM and TO dates.
- 4

Tap Generate & Download CSV, then confirm Download in the dialogue.

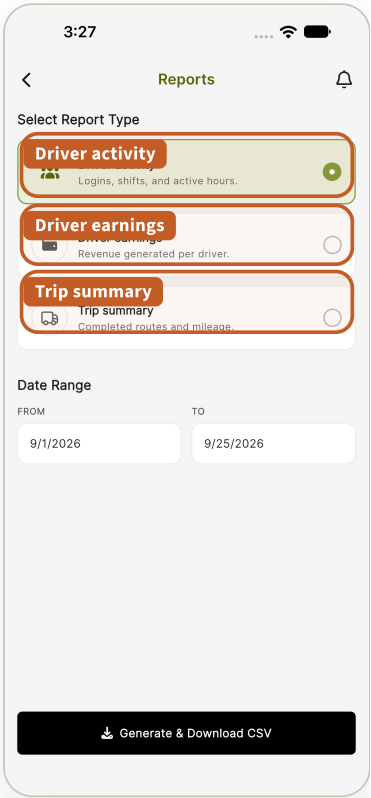

Explore this screen

Select report type

Activity, earnings, or trips

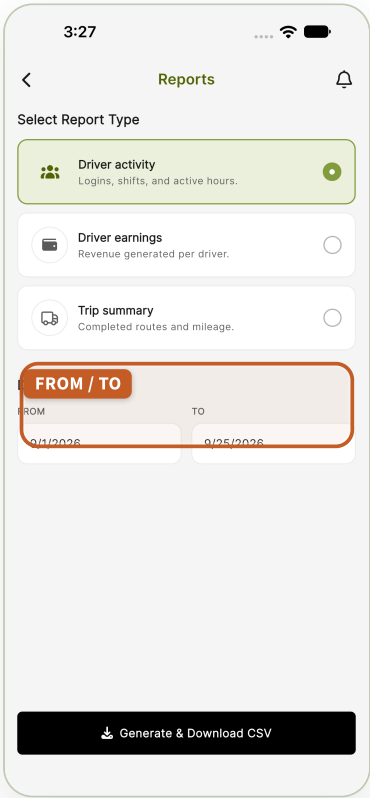

Pick one radio: Driver activity (logins, shifts, active hours), Driver earnings (revenue per driver), or Trip summary (completed routes and mileage). Only the selected type is exported.

Date range

FROM and TO before you export

Set FROM and TO so the CSV matches the window you are explaining. Align with Bookings / Earnings filters when reconciling — mismatched dates cause false alarms.

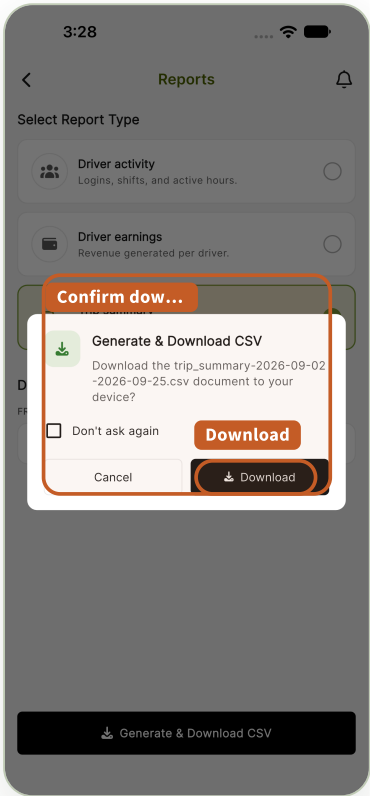

Generate & Download CSV

Confirm in the dialogue

Tap Generate & Download CSV. A dialogue names the file (for example trip_summary-... csv) and asks to download to your device. Tap Download to save, or Cancel to stay. Check Don't ask again only if you are sure you want to skip the prompt next time.

TIP

Prefer Reports over Home screenshots when finance or ops need durable numbers.

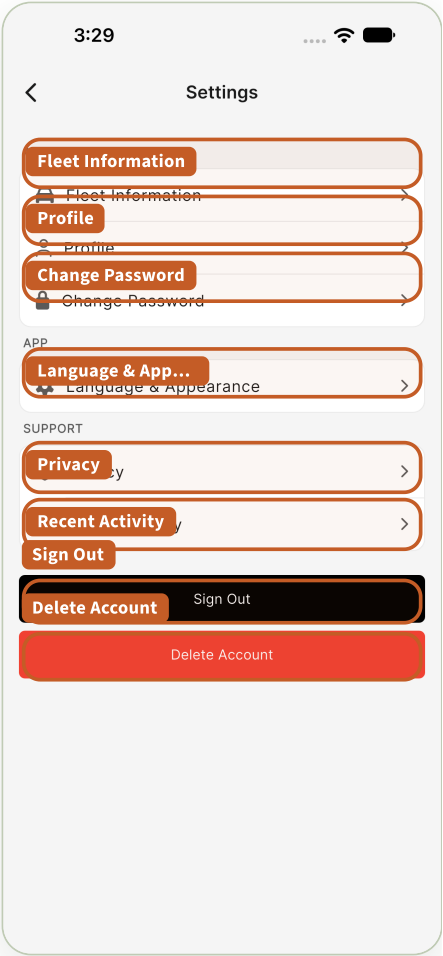

Settings

Know what each Settings row does before you change fleet or account options.

More screens · Account, app, support, sign out

Steps

- 1 Open side menu → Settings.
- 2 Use Account rows for fleet info, profile, and password.
- 3 Use Language & Appearance for theme and language.
- 4 Open Privacy or Recent Activity under Support when needed.
- 5 Sign Out to leave this device; Delete Account only when you mean to remove the account.

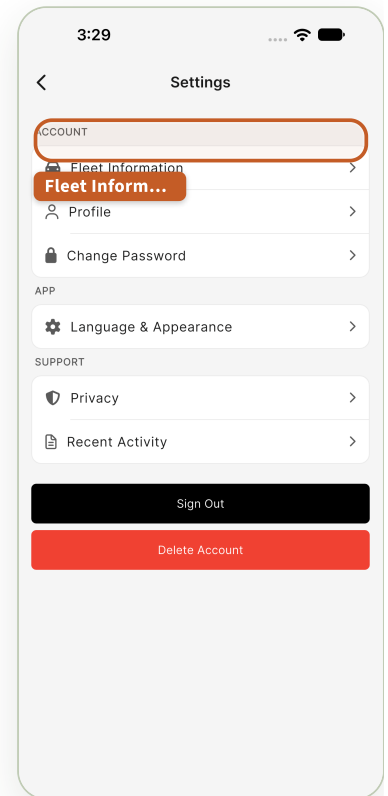

Explore this screen

Fleet Information

Your fleet's account details

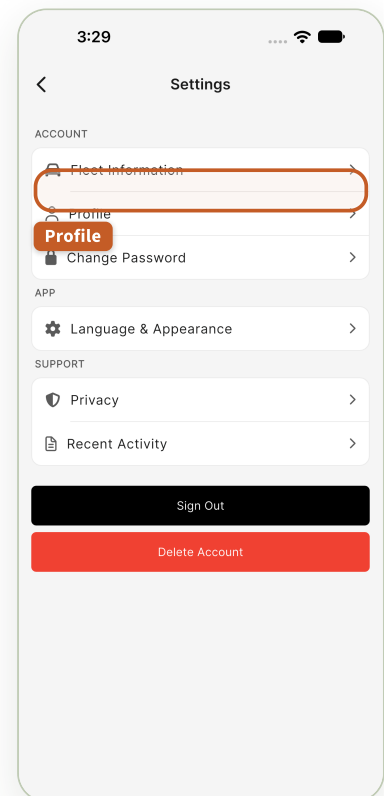

Opens fleet-level account information (company / fleet identity used by the operator app). Use it to review or update fleet details your role allows — not day-to-day trip ops.

Profile

Your operator profile

Opens your personal profile — name and contact details for this signed-in user. Keep phone and email accurate so office and drivers can reach the right person.

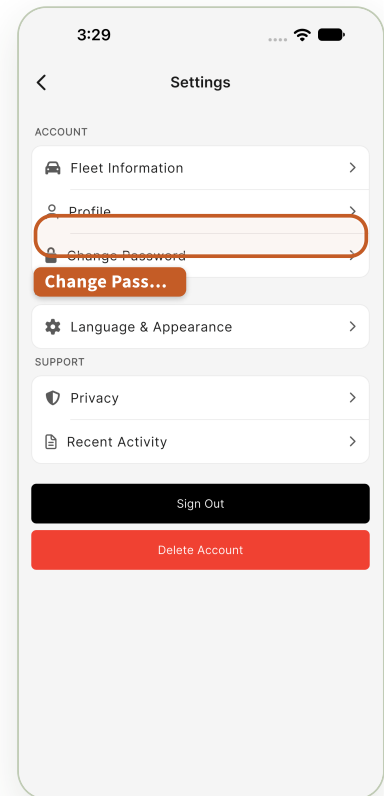

Change Password

Update login credentials

Starts the password-change flow for this account. Use it if you suspect a shared or leaked password, or after an operator leaves the role. Prefer a private device when you change it.

TIP

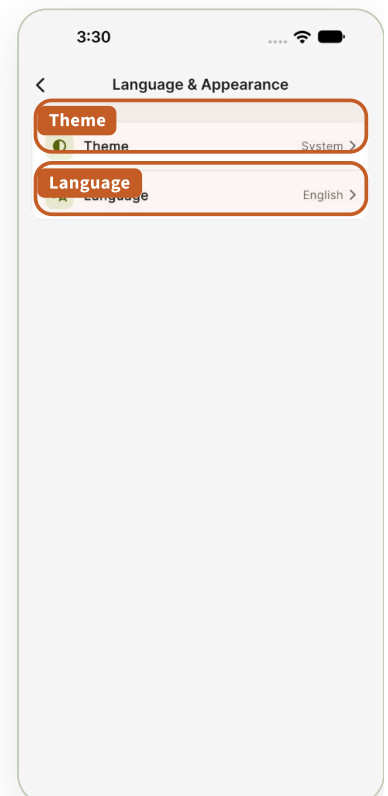

After a password change, confirm you can still sign in on this device.

Language & Appearance

Theme and language

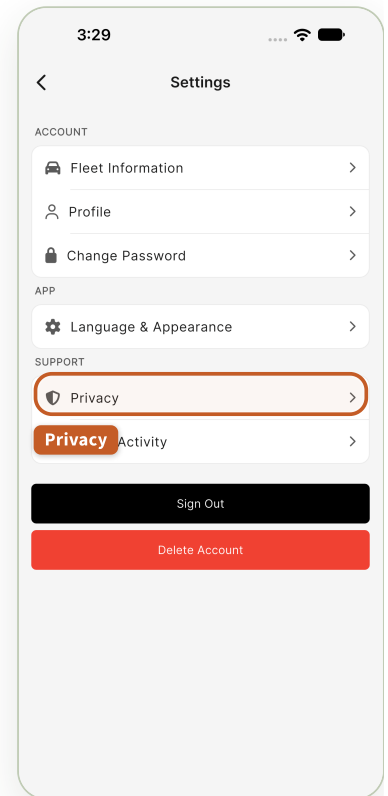

Opens Language & Appearance. Tap Theme to choose System, Light, or Dark (System follows the phone). Tap Language to change the app UI language (for example English). Same controls exist on Sign in before you log in.

Privacy

Privacy policy and related info

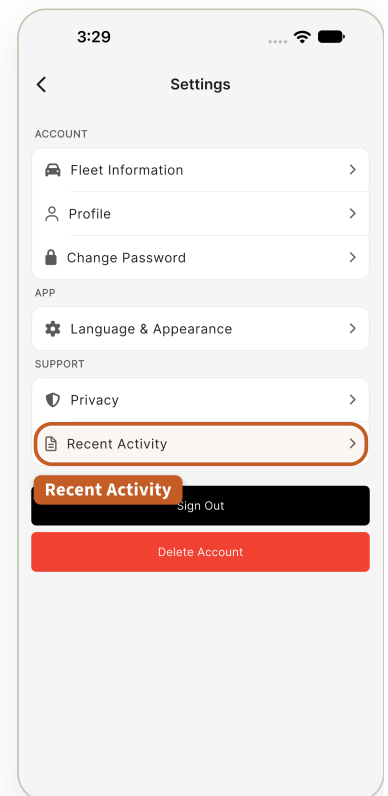

Opens privacy information for the app (policy and related disclosures). Read it when you need to confirm how fleet data is handled — it is not a trip ops control.

Recent Activity

Log of recent account actions

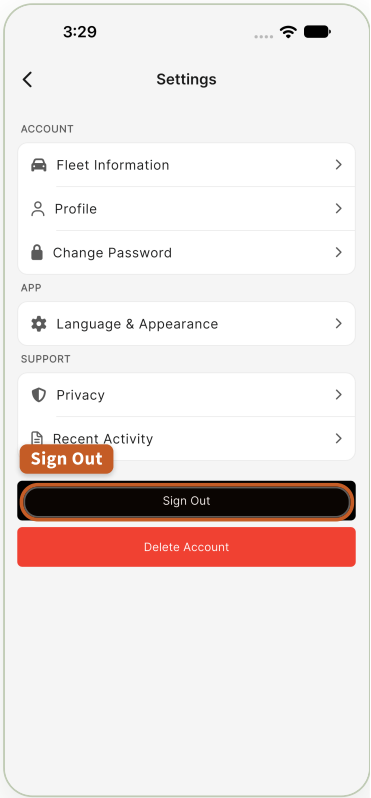

Shows recent activity for this account — useful when auditing who changed something or confirming a sign-in / settings action. Not a substitute for Bookings or Reports.

Sign Out

End this device session

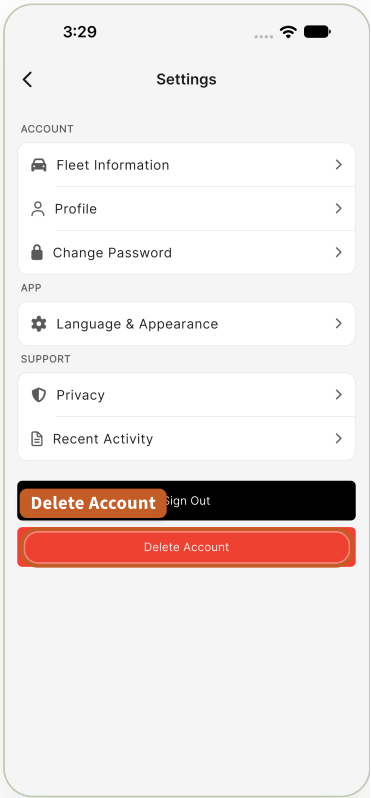

Signs you out of the app on this device and returns you to Sign in. Use it on shared tablets or when handing the phone to someone else. Open trips and assignments stay in the fleet — you only leave your session.

Delete Account

Permanent — use with care

Starts account deletion. This is destructive: it removes this account access permanently (follow any confirm prompts carefully). Day-to-day operators should not use this unless a fleet admin explicitly asks. Prefer Sign Out when you only need to leave the device.

Operator rules

Keep ops consistent: Accept before Assign, check Live Map, keep master data honest, Reject only when needed.

Reference · Short do / don't checklist

Steps

- 1 Accept (when required) before Assign.
- 2 Check Live Map for online drivers near the pickup.
- 3 Keep Drivers, Vehicles, and Greeters Active statuses truthful.
- 4 Reject only when the fleet will not take the trip.

Explore this screen

Order of operations

List → Detail → Accept → Assign

Standard path: Bookings list → Ride Details → Accept → Assign driver/vehicle/greeter.

Live Map is a side check, not a substitute for Assign. Full steps live in Accept & Assign and Live Map.

Data hygiene

Bad master data breaks assign

Inactive cars left Active, missing greeters, and stale driver phones show up as assign failures. Fix Drivers, Vehicles, and Greeters in setup — not mid-Accept on a live booking.
