-------------------	----------------------------

.....

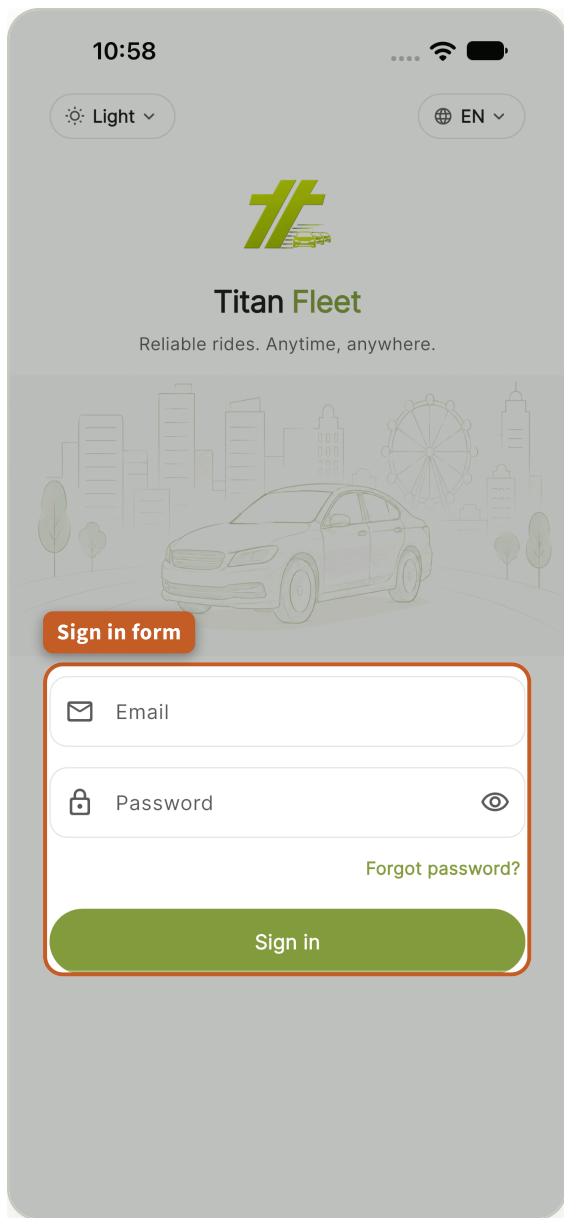

Sign in

Sign in to Titan Fleet with your fleet email and password, and set Light/Dark/System theme or language before you enter.

Start here · Email, password, theme, language

Steps

- 1 Open the Titan Fleet operator app to the Sign in screen.
- 2 Optional: set theme (Light / Dark / System) and language (for example EN) at the top.
- 3 Enter your fleet Email and Password, then tap Sign in.
- 4 Use Forgot password? if you cannot sign in — that starts a reset email code flow.

Explore this screen

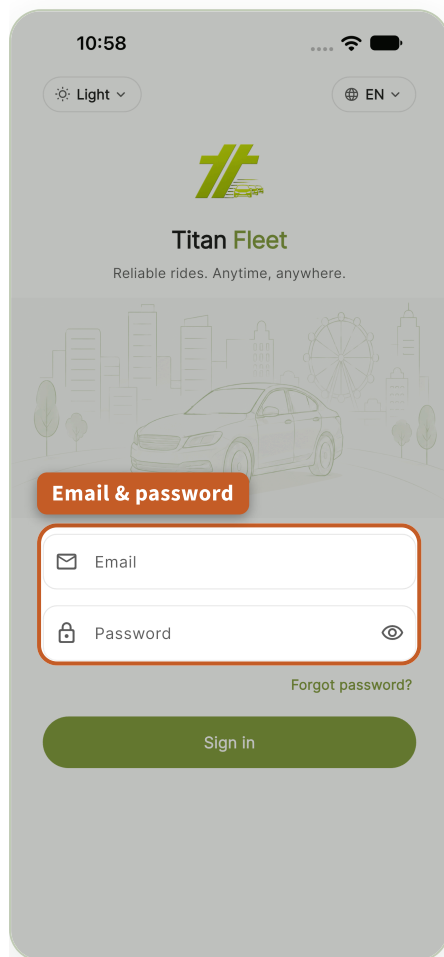

Email & password

Sign in with fleet credentials

Enter the operator Email and Password for your fleet account, then tap Sign in. Use the eye icon on the password field to show or hide what you typed.

TIP

Use the fleet / operator email your admin gave you — not a personal passenger account.

Theme (Light / Dark / System)

Set appearance before sign-in

The theme control at the top left opens Light, Dark, or System. Pick Light for the default bright UI, Dark for a dim UI, or System to follow the phone setting. You can change this again later after you are signed in.

TIP

Help center docs use Light as the default look; operators can still choose Dark on this screen.

Language

EN and other locales

The language control at the top right (globe + code such as EN) lets you switch the Sign in UI language — for example English or Spanish — before you authenticate.

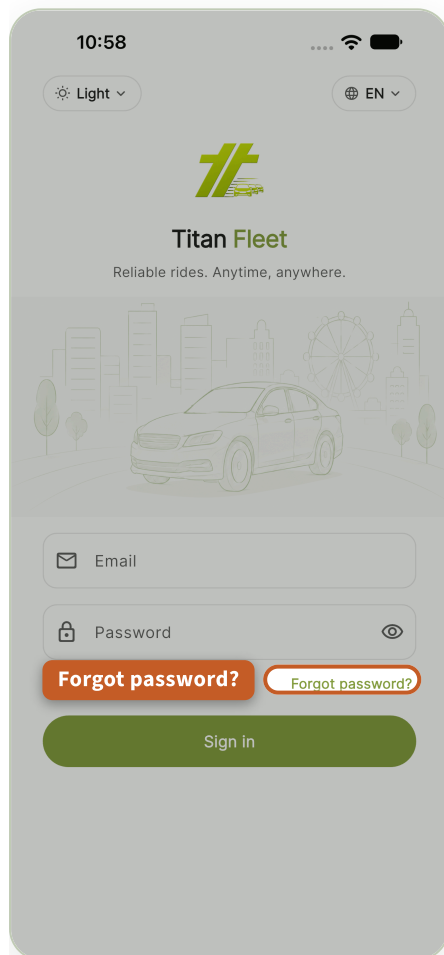

TIP

Change language here if the Sign in labels are not in the language you need.

Forgot password?

Start the reset flow

Tap Forgot password? under the password field to begin the reset steps. You will enter your fleet email and receive a code if the account is registered.

Forgot password

Reset your operator password by requesting a code to your registered fleet email.

[Start here](#) · Email a reset code (step 1 of 3)

Steps

- 1 From Sign in, tap Forgot password?
 - 2 On Step 1 of 3, enter your fleet email.
 - 3 Tap Send code — if the email is a registered operator account, Titan Fleet emails a code.
 - 4 Continue with the code and new password on the next steps in the app.
-

Explore this screen

Step 1 — fleet email

Send code to a registered account

Step 1 of 3 asks for your fleet email. Enter the same operator email you use to Sign in. Send code emails a reset code only when that address is a registered operator account.

TIP

If no email arrives, confirm the address with your fleet admin and check spam.

Back to Sign in

Cancel and return

Use the back control at the top left to leave the reset flow and return to Sign in without changing your password.

Home

See who is online, review Last Week performance by default, then open Online or Live Map when you need a driver.

[Start here](#) · [Fleet status](#), [Last Week performance](#)

Steps

- 1 Open Home (bottom tab). Fleet Status shows Online and Offline counts, with View Live Map underneath.
 - 2 Under Performance, Last Week is selected by default — KPI cards and charts match that week.
 - 3 Switch to This Week, Today, or Yesterday when you need a different preset — or open Custom to pick one day or a specific date range.
 - 4 Open Online (or Online drivers) to find a driver who is live right now, then tap their row for the full record.
-

Explore this screen

Fleet Status

Online / Offline + Live Map

At the top of Home, Fleet Status shows how many drivers are Online and Offline right now. Use View Live Map to see their live positions on the map.

TIP

Online here is a quick count. Open Online drivers or Live Map when you need to find a specific person.

Earnings & trip cards

Money and rides at a glance

Home shows Gross Earnings (and per-vehicle), Total Trips, Completion Rate (with cancellations), and Total Fleet (with how many are Active). These numbers follow the Performance period — Last Week by default.

TIP

Completion Rate and cancellation % help you spot a rough week before you dig into Bookings.

Last Week (default)

Home opens on last week

When you open Home, Performance defaults to Last Week. KPI cards, Earnings, and Trips charts all use that window until you change the chip. Confirm the date label on the charts (for example “Earnings (Aug 20, 2026 – Aug 31, 2026)”).

TIP

If numbers look wrong, check whether you still have Last Week selected — or whether Custom is still on from an earlier session.

This Week / Today / Yesterday

Other quick presets

Tap This Week, Today, or Yesterday to jump to those windows without opening a date picker. Today and Yesterday drive hourly charts; week views roll performance up across days.

TIP

Use Today when you want hourly detail for the current day; use a week preset for the bigger trend.

Custom (one day or dates)

Pick a day or a date range

Custom is the sub-option when presets are not enough. Open Custom to select a single day / specific date, or a from-to range. Charts and KPI cards refresh to match what you confirm.

TIP

Custom is for exact windows (one busy day, an event weekend, payroll week). Switch back to Last Week when you want the default again.

Earnings & trips charts

See when money and rides happened

On a single-day filter, Earnings and Trips break activity down by hour. On a week filter (including the Last Week default), charts show the day-by-day trend. Tap or scrub a bar/point for the exact amount or trip count.

TIP

If charts look empty, switch to a period that had trips, or pull to refresh.

Online drivers from Home

See who is online, then search

From Home, open Online to list every driver who is currently online. You can search a specific driver there, then tap their row to open their profile — rides, money, documents, vehicles, and activate / deactivate.

TIP

Online is for who is live right now. The full Drivers tab is the full roster (including offline).

Notifications bell

Alerts from the header

The bell on Home opens fleet notifications (new bookings, status changes, and similar alerts) without leaving the dashboard.

Online drivers

Review online drivers, search one person, and open their profile.

Start here · Who is online + search

Steps

- 1 From Home, open Online (Online drivers).
 - 2 Scan the list — each row is a driver who is online (green dot on the avatar).
 - 3 Use Search drivers... to find a specific person.
 - 4 Tap a driver to open their record (rides, earnings, documents, vehicles, activate / deactivate).
-

Explore this screen

Online list

Only drivers who are online

This screen lists drivers who are currently online. Each card shows initials, name, and phone, with a green online indicator. It is not the full roster — offline drivers stay on the Drivers tab.

TIP

If someone should appear here but does not, ask them to open the driver app and check connectivity.

Search a driver

Find one person in the online list

Use Search drivers... at the top to filter the online list by name. Select the match to open that driver's profile.

Open driver profile

Tap a row for full records

Tap a driver to see their records: quality score, earnings, completed and cancelled trips, rating, completion rate, documents, vehicle assignment, and Activate / Deactivate or Remove.

Driver profile

Review one driver's performance, upload documents, assign or unassign vehicles, and activate or deactivate them.

Start here · Records, docs, vehicles, status

Steps

- 1 Open a driver from Online drivers (or from the Drivers tab).
- 2 Review the header (Approved / Online) and performance cards — earnings, trips, cancellations, rating, completion.
- 3 Scroll to Vehicle Assignment to assign, unassign, check in, or check out vehicles.
- 4 In Documents, upload or replace files (JPG, PNG, or PDF, up to 10 MB per type) and wait for review where needed.
- 5 Use Deactivate / Activate (or Remove) when you need to change that driver's status.

Explore this screen

Rides & money records

What this driver earned and completed

The profile shows Quality Score, Total earnings, Completed trips, Cancelled trips, Rating, and Completion rate. Use these when you need that driver's performance — not only the fleet totals on Home.

TIP

Contact shortcuts (email / phone / call) sit in the header card.

Activate / Deactivate / Remove

Change status for this driver

From the profile, tap Deactivate to take a driver out of active work, or Activate when they should work again. Remove permanently deletes them from the fleet when that is what you intend — confirm carefully.

WATCH OUT

For several drivers at once, use multi-select on the Drivers tab instead.

Assign & unassign vehicles

Link cars to this driver

Under Vehicle Assignment, pick a vehicle from the list and tap Assign. For cars already linked, use Unassign, Check out, or Check in as needed. Keep assignments accurate so Bookings and Live Map reflect who is driving what.

Upload documents

NIC, licence, and more at the bottom

The Documents section at the bottom of the same profile lets you upload one file per document type (JPG, PNG, or PDF, up to 10 MB). Each upload is reviewed before approval. Use View or Replace on items such as NIC Front/Back and Driving Licence Front/Back. Pending means uploaded and waiting for admin review.

TIP

Do not leave Pending docs forever — replace rejected files promptly.

Live Map

See where your online drivers are right now, or search one driver to find them on the map.

[Start here](#) · [Live driver locations + search](#)

Steps

- 1 Open Live Map from Home (View Live Map) or from the side menu.
 - 2 Pins appear for drivers who are online — each shows initials, name, and a green online dot.
 - 3 Pan and zoom the map to scan the fleet's live locations.
 - 4 To find one person, tap Search drivers..., type a name, and select them — the map focuses on that driver's live location.
 - 5 Use back when you are done. Accept and assign still happen in Bookings.
-

Explore this screen

Online drivers in real time

See who is online on the map

Live Map plots your drivers who are currently online. Each pin shows initials (and usually their name). A green dot means they are online. Drivers who are offline or signed out do not appear.

TIP

If someone should be online but has no pin, ask them to open the driver app and check GPS / location permission.

Live driver locations

Watch where the fleet is now

This is where you see live locations of your drivers. Pins move as online drivers move, so you can judge who is near a pickup or far away. It is current position only — not a past trip replay.

TIP

Location can lag a few seconds depending on network and GPS.

Search a specific driver

Find one person on the map

Use the Search drivers... field at the top to find a specific driver. Type their name, pick them from the results, and the map jumps to that driver's live location so you do not have to hunt across the whole map.

TIP

Search only helps for drivers who are currently showing on Live Map (online with a location).

Open from Home

Fastest path: View Live Map

The quickest way in is Home → View Live Map. You can also open Live Map from the side menu when you are on another screen.

What Live Map is not for

No assigning or chat here

Live Map is for seeing who is online and where (and searching one driver). You do not accept bookings, assign drivers, reject trips, or message customers here. Switch to Bookings for Accept / Assign / Reject.

WATCH OUT

Think of Live Map as awareness — Bookings is the workflow.

Side menu

Open the drawer for screens that are not on the bottom tabs.

Start here · Reach Greeters, Live Map, Settings...

Steps

- 1 Tap the hamburger (≡) at the top left of Home or other main tabs.
 - 2 Scroll the drawer list to the screen you need.
 - 3 Tap an item — Live Map, Greeters, Documents, Performance, Calendar, Earnings, Reports, or Settings.
 - 4 Use the same hamburger (or back) to leave that screen.
-

Explore this screen

Hamburger opens the drawer

Top-left menu control

The three-line icon opens the side navigation. Bottom tabs cover Home, Drivers, Vehicles, and Bookings; everything else lives in this drawer.

Drawer destinations

Greeters through Settings

Typical items: Greeters, Documents, Performance, Calendar, Earnings, Reports, Live Map, Settings. Labels may vary slightly by app version, but the pattern is the same — secondary tools live here.

Drawer vs bottom tabs

When to use which

Use bottom tabs for daily fleet work (Home, Drivers, Vehicles, Bookings). Use the drawer for supporting tools and Live Map when you are not already on Home.

Drivers

Find drivers, activate or deactivate them (one or many), and add new drivers to the fleet.

Fleet setup · Search, multi-select, add

Steps

- 1 Open the Drivers tab on the bottom bar.
 - 2 Search by name, or use status chips (All, Active, Awaiting docs, Pending, Rejected).
 - 3 Long-press a driver to select them, then tap Deactivate or Reactivate — or use the control to the right of Search to turn on multi-select and pick several drivers at once.
 - 4 Tap + to open Add Driver, fill the form, and Continue.
-

Explore this screen

Search & status chips

Find and narrow the list

Use Search drivers... to find someone by name. Status chips (All, Active, Awaiting docs, Pending, Rejected) narrow the roster. Tap a card (when you are not in multi-select) to open that driver's details.

TIP

Green dots on avatars show drivers who are online.

Long-press to select

Activate or deactivate quickly

Long-press a driver card to enter selection mode. The card gets a checkmark and a green outline. From the bar at the bottom, tap Deactivate or Reactivate for the selected driver(s).

TIP

Long-press is the fastest path when you only need one or two drivers.

Multi-select (search-row button)

Select several drivers at once

Tap the control on the right of the search field to enable multi-select. Circles appear on each card so you can select several drivers, then Deactivate or Reactivate them together from the bottom bar.

TIP

The footer shows how many are selected (for example “1 selected”) before you confirm the action.

Add a new driver (+)

Open the Add Driver form

Tap the green + button to open Add Driver. Enter first name, last name, email, phone (with country code), and a temporary password (at least 8 characters), then Continue.

TIP

After you add them, they can appear in assign pickers and on Live Map once they are online.

Vehicles

Maintain plate, type, and Active / Inactive status for assignable cars.

Fleet setup · Fleet cars and status

Steps

- 1 Open the Vehicles bottom tab.
 - 2 Filter with All / Active / Inactive chips or search.
 - 3 Tap a vehicle to review details.
 - 4 Use + to register a new vehicle.
-

Explore this screen

Active / Inactive chips

Hide cars you cannot assign

Inactive vehicles stay in history but should not be offered when assigning. Keep status honest so operators do not pick a car that is in the shop.

Vehicle cards

Plate and type on each row

Cards show plate, category, and status. Open a card before assign if you need capacity or notes that are not on the list.

Add vehicle (+)

Register plates for the fleet

Use + to add a vehicle with plate and type. New vehicles become selectable in the Assign flow once Active.

Greeters

Manage greeters you can attach when a booking needs meet-and-greet.

Fleet setup · Airport / meet-and-greet staff

Steps

- 1 Open the side menu → Greeters.
 - 2 Browse or search the greeter list.
 - 3 Add or update greeter profiles as needed.
 - 4 During Assign on a booking, pick a greeter when the trip requires one.
-

Explore this screen

When greeters are needed

Meet-and-greet bookings

Greeters are for trips that need someone at arrivals or a lobby — not every booking. Skip greeter selection when the customer only needs a driver and car.

Link on Assign

Pick greeter in Ride Details

After Accept (when required), Assign lets you choose driver, vehicle, and optionally greeter. Keep the Greeters list current so the picker is useful.

Bookings list

Find pending and upcoming bookings, then open Ride Details.

Bookings · Pre-booked trips & status chips

Steps

- 1 Open the Bookings bottom tab (Pre-booked).
 - 2 Use status chips to focus Pending, Assigned, etc.
 - 3 Optional: funnel / date filter to narrow the list.
 - 4 Tap a booking card to open Ride Details.
-

Explore this screen

Status chips

Pending, Assigned, and more

Chips filter the list by booking state. Start with Pending when you are clearing the queue; switch to Assigned to confirm who is on which trip.

Booking cards

Route and time on each row

Each card summarizes pickup, drop-off, time, and status. Tap through for income, Reject, Accept, and Assign actions.

Export

Share or download the list view

Where shown, export pulls the current filtered list for sharing or records. Filters apply before export — set chips and date first.

Accept & Assign

Accept a pending booking, then assign driver, vehicle, and greeter.

Bookings · Accept before Assign; Reject if needed

Steps

- 1 From Bookings, open a pending booking (Ride Details).
 - 2 Review route, time, and fleet income amount.
 - 3 Accept when your fleet will take the trip — before Assign.
 - 4 Tap Assign and choose driver, vehicle, and greeter if required.
 - 5 Use Reject only when you will not take the booking.
-

Explore this screen

Accept before Assign

Order matters

For bookings in PENDING ACCEPTANCE (or similar), Accept first so the fleet claims the trip. Assign comes after — picking driver, vehicle, and greeter. You cannot meaningfully finish assignment until the booking is accepted when the UI requires it.

TIP

If you only see Reject and Assign, follow the buttons present on your build; some states skip a separate Accept.

Fleet income amount

What the fleet earns on this trip

Ride Details shows the fleet income for this booking. Confirm it matches your commercial expectation before Accept. This is the amount associated with the fleet side of the trip, not necessarily the passenger fare line-by-line.

Reject

Decline the booking for your fleet

Reject releases the booking when you cannot or will not fulfill it. Use it sparingly — it is final for your fleet on that offer. Prefer Accept + Assign when you have capacity.

WATCH OUT

Double-check date/time and location before rejecting.

Assign driver / vehicle / greeter

Complete the crew for the trip

Assign opens pickers for driver and vehicle, and greeter when the trip needs meet-and-greet. Choose an online, nearby driver when possible (check Live Map first). Confirm plate matches the car that will show up.

Ride hailing tab

Switch Bookings to on-demand ride-hailing jobs when your fleet handles them.

Bookings · On-demand vs pre-booked

Steps

- 1 Open Bookings.
 - 2 Switch from Pre-booked to the Ride Hailing tab.
 - 3 Work the list with the same chip / detail pattern.
 - 4 Open a job → Accept / Assign as required.
-

Explore this screen

Pre-booked vs Ride Hailing

Two lists under Bookings

Pre-booked holds scheduled transfers; Ride Hailing holds on-demand jobs. Filters and cards behave similarly — do not assume a trip is missing until you check both tabs.

Same Ride Details pattern

Accept / Assign still apply

Opening a ride-hailing card still leads to Ride Details with income and assignment actions. Timing is tighter — watch Live Map for nearby online drivers.

Date filter (funnel)

Narrow Bookings (and similar lists) by date without losing your place.

Bookings · Presets, Custom, clear with All

Steps

- 1 On Bookings, tap the funnel icon.
 - 2 Pick a preset (Today, This week, ...) or Custom range.
 - 3 Apply to refresh the list.
 - 4 Choose All (or clear) when you want every date again.
-

Explore this screen

Funnel icon

Opens the filter sheet

The funnel control on list screens opens the filter sheet. Date options live here alongside any other filters your build exposes.

Presets

Today, week, and similar

Presets are one-tap ranges for common operator windows. Prefer a preset when it matches how you work the queue — faster than Custom.

Custom range

Pick from and to dates

Custom opens a from-to picker for exact windows (payroll week, event weekend, audit). Confirm both ends before applying.

Clear with All

Reset the date filter

Select All (or the clear action on the sheet) to remove the date constraint and show the full list again. Useful after a focused Custom search.

Calendar

See bookings laid out by day so you can spot busy slots.

[More screens](#) · [Day](#) / [week view of trips](#)

Steps

- 1 Open side menu → Calendar.
 - 2 Move between days or weeks with the header controls.
 - 3 Tap an entry to jump toward booking detail when linked.
-

Explore this screen

Spot busy slots

Capacity planning at a glance

Dense days mean you need more online drivers. Cross-check Live Map and Drivers before accepting more volume on those dates.

Calendar vs Bookings list

Two ways to find the same trips

Calendar is for time layout; Bookings list is better for status chips, Accept, and Assign. Use both when planning a heavy day.

Documents

Store and retrieve fleet-related documents from one place.

More screens · Fleet files & uploads

Steps

- 1 Open side menu → Documents.
 - 2 Browse or search existing files.
 - 3 Upload or replace documents as your ops process requires.
-

Explore this screen

What belongs here

Fleet-level files

Use Documents for fleet paperwork you need handy in the app. Driver-specific papers may also live on the driver profile — keep a clear ops rule so nothing is duplicated blindly.

Keep files current

Replace expired uploads

Out-of-date insurance or permits cause assign headaches later. When a file expires, replace it here (and on the driver/vehicle if mirrored).

Performance

Review deeper performance metrics for a chosen period.

More screens · Stats beyond the Home snapshot

Steps

- 1 Open side menu → Performance (or use Home chips for a quick view).
 - 2 Set the date range you care about.
 - 3 Read the metrics; drill only if your build offers detail rows.
-

Explore this screen

Performance vs Home

Home is the snapshot

Home shows a compact performance strip. The Performance screen is for longer review sessions without the rest of the dashboard chrome.

Pick the period first

Numbers follow the range

Always set the date window before judging trends. Comparing Today to Custom month-to-date without noticing will mislead staffing decisions.

Earnings

Track fleet earnings for reconciliation and planning.

More screens · Fleet money over time

Steps

- 1 Open side menu → Earnings.
 - 2 Select the period.
 - 3 Compare totals with booking income you already accepted.
-

Explore this screen

Period totals

Sum for the selected window

Earnings aggregates money for the selected dates. Use the same window you use in Reports when reconciling.

Vs booking income

Per-trip vs rolled up

Ride Details shows income for one trip. Earnings rolls many trips together. Investigate gaps by filtering Bookings for the same dates.

Reports

Generate or view reports for ops and finance handoff.

[More screens](#) · [Exportable summaries](#)

Steps

- 1 Open side menu → Reports.
 - 2 Choose report type and date range.
 - 3 Generate / export per your process.
-

Explore this screen

Match list filters

Same dates as Bookings

Align report dates with the Bookings funnel range when you are explaining a number to someone else. Mismatched windows cause false alarms.

Handoff use

Ops → finance

Reports are for sharing outside the live app session. Prefer Reports over screenshots of Home when someone needs durable numbers.

Settings

Adjust fleet preferences and account options safely.

[More screens](#) · Account & fleet preferences

Steps

- 1 Open side menu → Settings.
 - 2 Change only what your role is allowed to change.
 - 3 Save / confirm when prompted.
-

Explore this screen

Who should change settings

Prefer a fleet admin

Settings can affect how the whole fleet app behaves. Day-to-day operators should avoid experimental toggles unless asked.

After you change something

Re-check Home and Bookings

Return to Home and Bookings after preference changes to confirm lists and chips still match your ops rules.

Operator rules

Stay consistent: Accept before Assign, use Live Map to check, Reject only when needed.

Reference · Short do / don't checklist

Steps

- 1 Accept (when required) before Assign.
- 2 Check Live Map for online drivers near the pickup.
- 3 Keep Drivers, Vehicles, and Greeters Active statuses truthful.
- 4 Reject only when the fleet will not take the trip.

Explore this screen

Order of operations

List → Detail → Accept → Assign

Standard path: Bookings list → Ride Details → Accept → Assign driver/vehicle/greeter. Live Map is a side check, not a substitute for Assign.

Data hygiene

Bad master data breaks assign

Inactive cars left Active, missing greeters, and stale driver phones all show up as assign failures. Fix master data in setup screens, not during a live Accept.

Custom date (Home)

Use Custom on Home when Last Week (or another preset) is not enough — pick one day or an exact from-to window.

Reference · One day or a specific date range

Steps

- 1 On Home, under Performance, tap Custom (calendar chip).
 - 2 Choose either a single day / specific date, or a from-to range in the picker.
 - 3 Confirm — KPI cards and charts refresh to that window.
 - 4 Tap Last Week (or another preset) when you want to leave Custom.
-

Explore this screen

When to use Custom

Beyond Last Week / presets

Home defaults to Last Week. Use Custom only when you need one specific day, a date that is not Today/Yesterday, or a custom multi-day range that the presets do not cover.

TIP

If numbers look unfamiliar, check whether Custom is still selected from an earlier session.

Select one day

A specific date for hourly detail

In Custom, pick a single day when you want that date's KPIs and hourly Earnings / Trips charts. Confirm the date label on the chart after you apply.

TIP

One-day Custom is the path when "Today / Yesterday" is not the day you care about.

From-to range

Both ends for a custom window

For a multi-day Custom window, set start and end before confirming. An open-ended mental range will not apply until both dates are chosen in the UI.

Same idea on lists

Bookings funnel Custom

Bookings date filter uses the same Custom concept via the funnel sheet. Learn it once on Home; reuse it on lists.
